CAT.ES11-80A-EMC-UK

5-Port Solenoid Valve

Series VQC

Connector Type Manifold

Series VQC1000/2000/4000

Outstanding response times and long life

(Metal seal: Single type with light and surge suppressor)

VQC1100: 10ms ±2ms; 200 million cycles
VQC2100: 20ms ±2ms; 200 million cycles
VQC4100: 17ms ±3ms; 100 million cycles

Compact and high flow

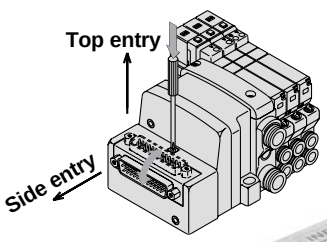
Type (Series)	Manifold pitch (mm)	Flow characteristics Note)						Applicable cylinder size (mm)
		Metal seal			Rubber seal			
		C[dm³/(s·bar)]	b	Cv	C[dm³/(s·bar)]	b	Cv	
VQC1000	10.5	0.72	0.25	0.18	1.0	0.30	0.25	to ø50
VQC2000	16	2.6	0.15	0.60	3.2	0.30	0.80	to ø80
VQC4000	25	6.9	0.17	1.7	7.3	0.38	2.0	to ø140

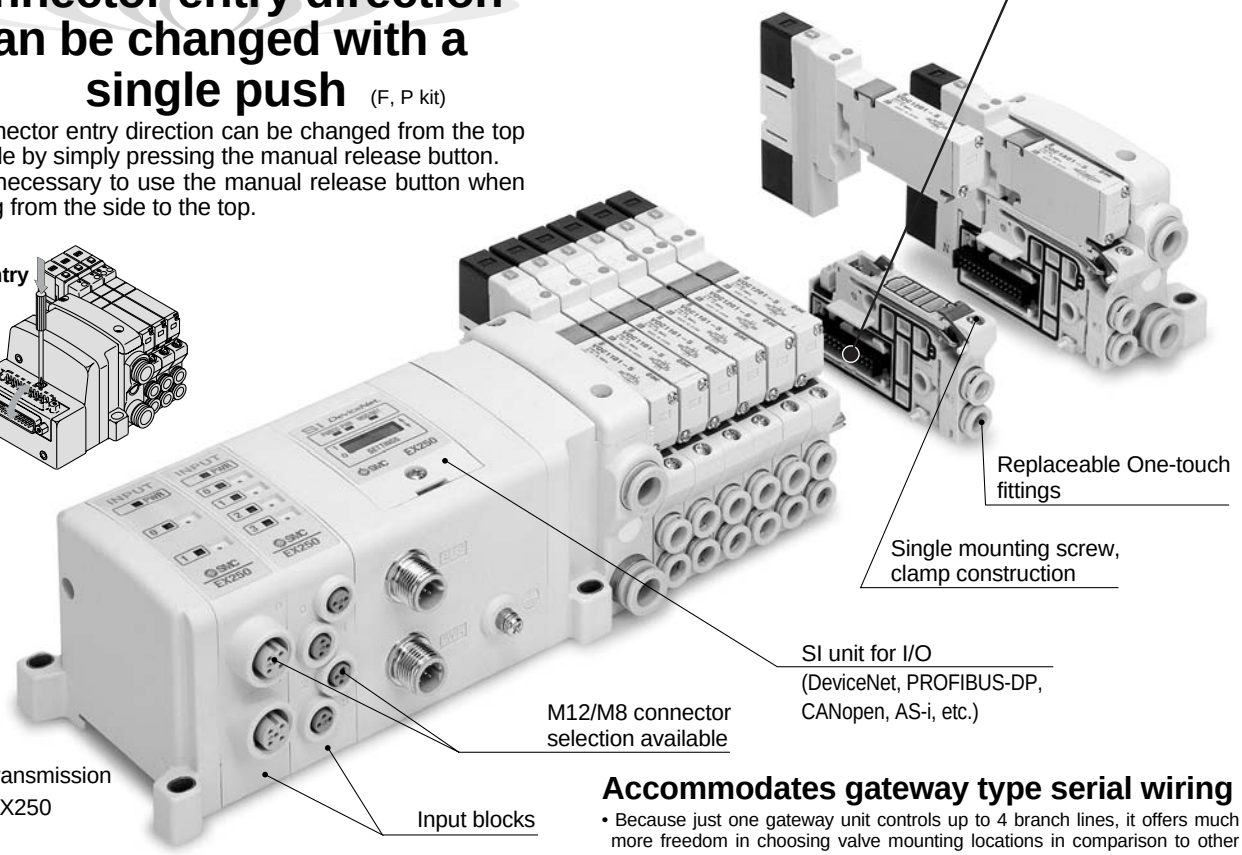
Note) Values for 2-position single from 4 to 5 and from 2 to 3. (From A to R1 and from B to R2).

Connector

Connector entry direction can be changed with a single push (F, P kit)

The connector entry direction can be changed from the top to the side by simply pressing the manual release button.
It is not necessary to use the manual release button when switching from the side to the top.



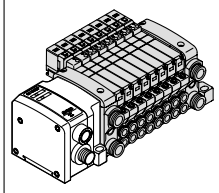


Accommodates gateway type serial wiring

- Because just one gateway unit controls up to 4 branch lines, it offers much more freedom in choosing valve mounting locations in comparison to other serial units.
- A single cable from the gateway provides both signal and power to each branch, thus eliminating the need for separate power connections for each manifold valve and input block.
- The use of a multi-connector for input blocks makes manifold station expansion or reduction a breeze.

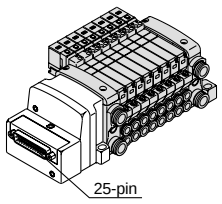
A wide variety of prepackaged wiring configurations

S Kit (Serial transmission)

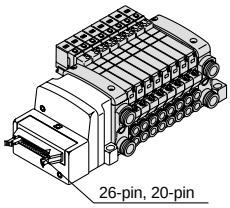


Protective enclosure conforms to IP 67

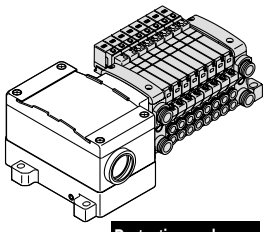
F Kit (D-sub connector)



P Kit (Flat ribbon cable)

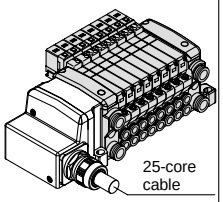


T Kit (Terminal block box)



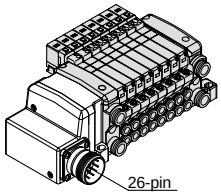
Protective enclosure conforms to IP 67

L Kit (Lead wire)



Protective enclosure conforms to IP 67

M Kit (Multiple connector)



Protective enclosure conforms to IP 67

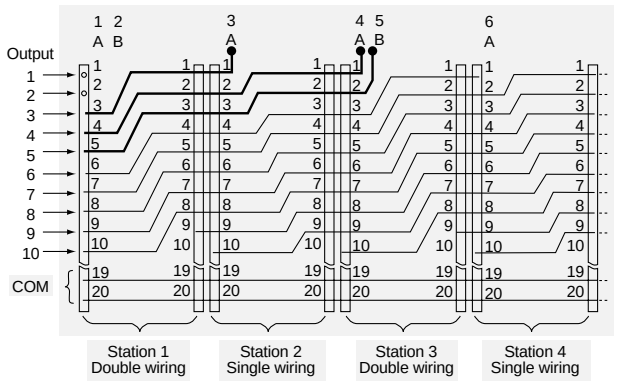
- Our six standard wiring packages bring a world of ease to wiring and maintenance work, while the protective enclosures of four of them conform to IP67 standards.
- The S Kit is compatible with a combined I/O unit. (If used with Gateway unit, SI must be output only.)

Conforming to IP67 for protection from dust and moisture

(Based on IEC529)

(For kits S, T, L and M)

Connector wiring diagram (mixed wiring)



(Refer to the connector wiring diagram)
Printed circuit board patterns between connectors are shifted at every station. This allows for viable connections to take place without necessarily specifying whether the manifold station is double, single, or mixed wiring.

Dual 3-port valves, 4 positions

VQC1000/2000 (Rubber seal type only)

- Two 3-port valves built into one body.
- The 3-port valves on the A and B sides can operate independently.
- When used as 3-port valves, only half the number of stations is required.
- Can also be used as a 4-position, 5-port type valve.

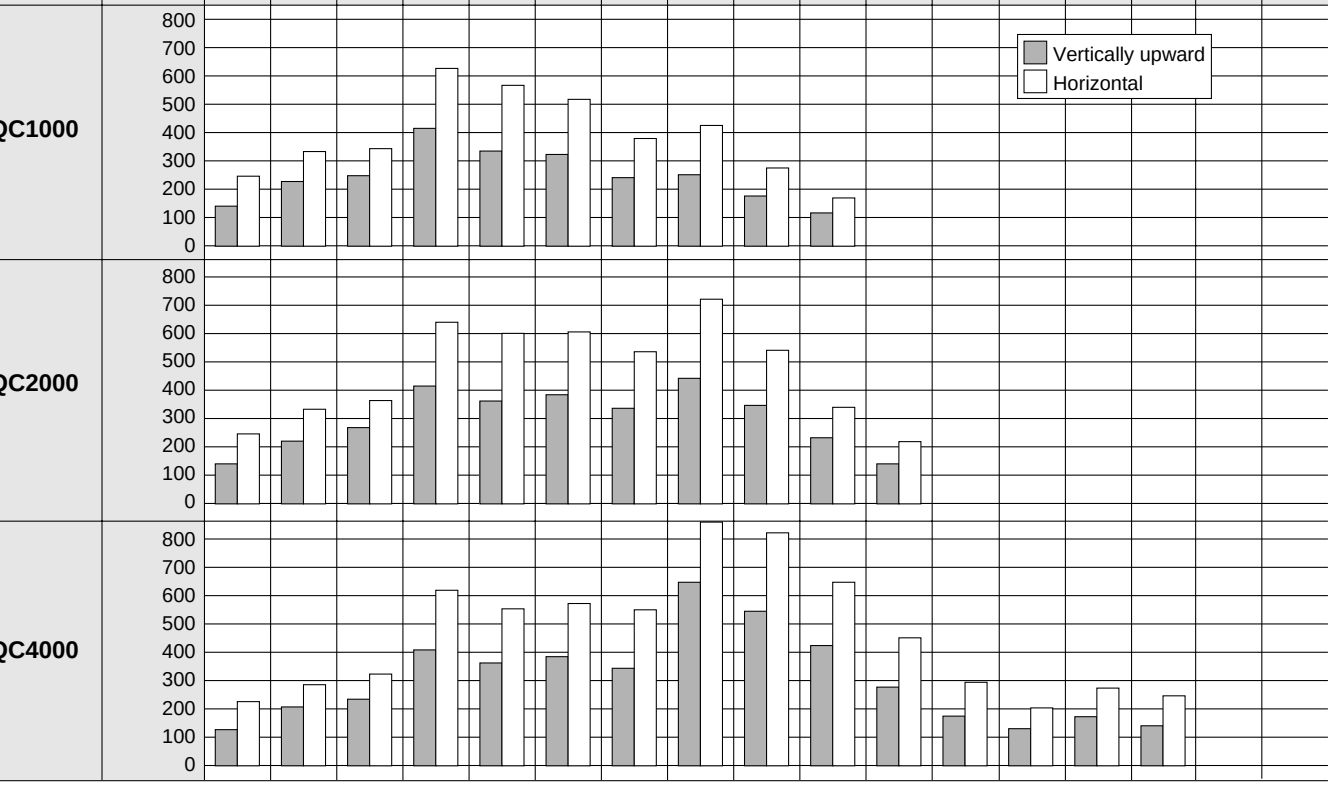
Cylinder average speed

This chart is provided as guidelines only.
For performance under various conditions, use SMC's Model Selection Program before making a judgment.

Series	Average speed mm/s	Cylinder bore size																
		Series CJ2 Pressure 0.5 MPa Load ratio 50% Stroke 60 mm			Series CM2 Pressure 0.5 MPa Load ratio 50% Stroke 300 mm				Series MB, CA Pressure 0.5 MPa Load ratio 50% Stroke 500 mm					Series CS1 Pressure 0.5 MPa Load ratio 50% Stroke 1000 mm				
		ø6	ø10	ø16	ø20	ø25	ø32	ø40	ø40	ø50	ø63	ø80	ø100	ø125	ø140	ø160	ø180	ø200
VQC1000	800 700 600 500 400 300 200 100 0																	
VQC2000	800 700 600 500 400 300 200 100 0																	
VQC4000	800 700 600 500 400 300 200 100 0																	



* Values at extension of a directly coupled cylinder when meter-out speed controllers are used with the needle full open.
* The average speed of the cylinder is obtained by dividing the stroke by the total stroke time.
* The load ratio is obtained by the following formula: ((Load weight x 9.8)/ Theoretical output) x 100%

1	Plug-in unit

Stations

01	1 station
⋮	⋮

The maximum number of stations differs depending on the electrical entry.

Cylinder port size

C3	With ø3.2 One-touch fitting
C4	With ø4 One-touch fitting
C6	With ø6 One-touch fitting
M5	M5 thread
CM	Mixed sizes and with port plug
L3	Top ported elbow Wtih ø3.2 One-touch fitting
L4	Top ported elbow With ø4 One-touch fitting
L6	Top ported elbow With ø6 One-touch fitting
L5	M5 thread
B3	Bottom ported elbow With ø3.2 One-touch fitting
B4	Bottom ported elbow With ø4 One-touch fitting
B6	Bottom ported elbowWith ø6 One-touch fitting
B5	M5 thread
LM	Elbow port, mixed sizes

Note 1) Indicate the size in the specification sheet in the case of CM and LM.

Note 2) Symbols for inch sizes areas follows:

<For One-touch fittings>

N1: ø1/8"
N3: ø5/32"
N7: ø1/4"
NM: Mixed

The top ported elbow is LN□ and the bottom ported elbow is BN□.

Kit designation/Electrical entry/Cable length

(Refer to page 2 for detailed information on kits.)

Options

Nil	None
B	All stations with back pressure check valve Note 1)
D	With DIN rail (rail length: standard)
D□	With DIN rail (rail length: special) Note 2)
K	Special wiring specifications Note 3) (except for double wiring)
N	With name plate
R	External pilot Note 4)
S	Direct exhaust with built-in silencer Note 5)

* When specifying more than one option, enter symbols in alphabetical order. Example: -BRS

Note 1) When using the back pressure check valve for the necessary stations only, enter the back pressure check valve part no. and indicate the number of manifold stations in the specification sheet.

Note 2) For special DIN rail length, indicate "D□." (Enter the number of stations inside □).
Example: -D08
In this case, stations will be mounted on a DIN rail for 8 stations regardless of the actual number of manifold stations.
The specified number of stations must be larger than the number of stations on the manifold.
Indicate "-D0" for the option without DIN rail.

Note 3) Be sure to indicate the wiring specifications in the specification sheet.

Note 4) For external pilot option, "-R", indicate the external pilot specification "R" for the applicable valves as well.

Note 5) The built-in silencer type does not satisfy the IP67 standard.

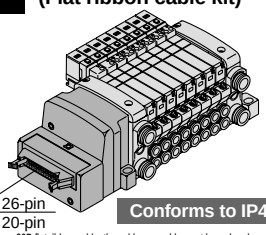
FD0	D-sub connector kit (25P) without cable	1 to 12 stations (24 stations)
FD1	D-sub connector kit (25P) with 1.5m cable	
FD2	D-sub connector kit (25P) with 3.0m cable	
FD3	D-sub connector kit (25P) with 5.0m cable	

P Kit (Flat ribbon cable kit)



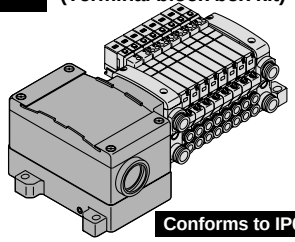
26-pin
20-pin

Conforms to IP40

Note) For a 20P flat ribbon cable, the cable assembly must be ordered separately.

PD0	Flat ribbon cable kit (26P) without cable	1 to 12 stations (24 stations)
PD1	Flat ribbon cable kit (26P) with 1.5m cable	
PD2	Flat ribbon cable kit (26P) with 3.0m cable	
PD3	Flat ribbon cable kit (26P) with 5.0m cable	
PDC	Flat ribbon cable kit (20P) without cable	1 to 9 stations (18 stations)

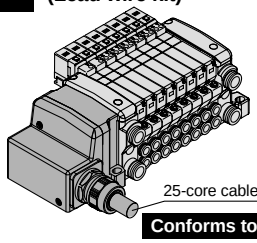
T Kit (Terminal block box kit)



Conforms to IP67

TD0	Terminal block box kit	1 to 10 stations (20 stations)

L Kit (Lead wire kit)

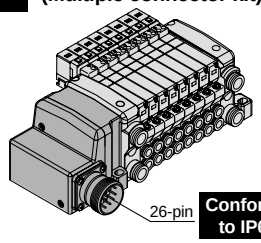


25-core cable

Conforms to IP67

LD0	Lead wire kit (25 core) 0.6m lead wire	1 to 12 stations (24 stations)
LD1	Lead wire kit (25 core) 1.5m lead wire	
LD2	Lead wire kit (25 core) 3.0m lead wire	

M Kit (Multiple connector kit)



26-pin

Conforms to IP67

MD0	Multiple connector kit (26P) without cable	1 to 12 stations (24 stations)
MD1	Multiple connector kit (26P) with 1.5m cable	
MD2	Multiple connector kit (26P) with 3.0m cable	
MD3	Multiple connector kit (26P) with 5.0m cable

Note 1) Values represented in this column are in the following conditions:
VQC1000: Cylinder port size C6 without a back pressure check valve
VQC2000: Cylinder port size C8 without a back pressure check valve
VQC4000: Cylinder port size Rc 3/8

Note 2) Values represented in this column are based on JISB8375-1981 (operating with clean air and a supply pressure of 0.5MPa. Equipped with light and surge voltage suppressor. Values vary depending on the pressure as well as the air quality.) Values for double types are when the switch is ON.

Standard Specifications

Valve specifications	Valve Configuration			Metal seal	Rubber seal
	Fluid			Air/Inert gas	
	VQC1000/2000	Max. operating pressure		0.7MPa (High pressure type: 1.0MPa) Note 4)	
		Min. operating pressure	Single	0.1MPa	0.15MPa
			Double	0.1MPa	
			3-position	0.1MPa	0.2MPa
			4-position	—	0.15MPa
	VQC4000	Max. operating pressure Note 3)		1.0MPa (0.7MPa)	
		Min. operating pressure	Single	0.15MPa	0.2MPa
			Double	0.15MPa	
			3-position	0.15MPa	0.2MPa
	Proof pressure			1.5MPa	
	Ambient and fluid temperature			–10 to 50°C Note 1)	
	Lubrication			Not required	
	Manual override			Push type/Locking type (tool required)/Locking type (manual override) Note 5)/Slide locking type Note 5)	
	Impact resistance/Vibration resistance			150/30 m/s^2 Note 2)	
	Enclosure			Dust proof (conforms to IP67)	
Electrical specifications	Rated coil voltage			24VDC	
	Allowable voltage fluctuation			±10% of rated voltage	
	Coil insulation type			Equivalent to B type	
	Power consumption (Current)		24VDC	1W DC (42mA), 0.5W DC (21mA)	
			12VDC	1W DC (83mA), 0.5W DC (42mA)	

Note 1) Use dry air to prevent condensation at low temperatures.

Note 2) **Impact resistance:** No malfunction resulted from the impact test using a drop impact tester. The test was performed one time each in the axial and right angle directions of the main valve and armature, for both energized and de-energized states.
Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000Hz. Test was performed in the axial and right angle directions of the main valve and armature for both energized and de-energized states.

Note 3) Values in ( ) are for the low wattage (0.5W) specification.

Note 4) Metal seal type only.

Note 5) Only for VQC1000/2000.

-X1	Remote I/O (RIO)

Specifications

Connection block	Solenoid valve (single, double) Relay output module (1 output, 2 outputs)
Communication connector	M12 connector (8-pin, plug, socket)
Number of connection block stations	Double solenoid valve Relay output module (2 points): Maximum 8 stations Single solenoid valve Relay output module (1 point): Maximum 16 stations
Block supply voltage	24 VDC
Block supply current	0.65A maximum
Current consumption	100mA or less (at rated voltage)
Weight (g)	115

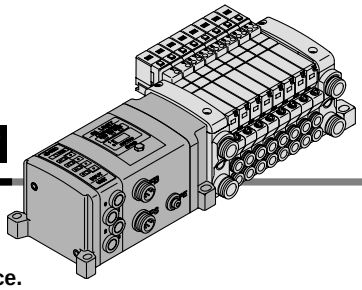
S VQC1000/2000/4000
Kit (Serial Transmission Kit) for I/O Conforms to IP67



Compatible network **DeviceNet/PROFIBUS-DP/CC-Link**

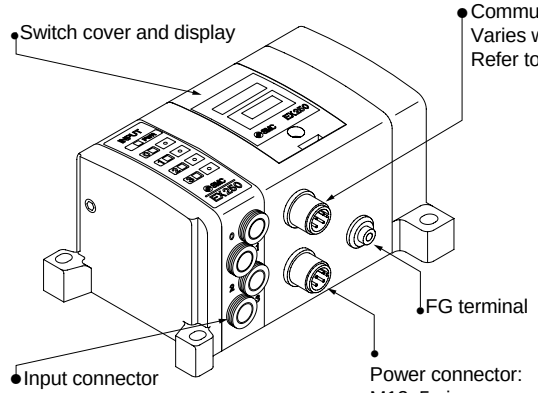
• The serial transmission system greatly reduces connection work, minimizes wiring, and saves space.

SI unit for DeviceNet/PROFIBUS-DP/CC-Link
As a DeviceNet/PROFIBUS-DP/CC-Link slave unit, this kit is capable of up to 32 points of solenoid valve ON and OFF control.
Furthermore, by connecting an input block, a maximum 32 sensor signal inputs are possible.

SI unit for AS-i
As a AS-i slave unit, this kit is capable of up to 4 or 8 points of solenoid valve ON and OFF control.
Furthermore, by connecting an inmput block, a maximun 4 or 8 sensor signal inputs are possible.

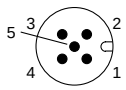
Input block
This expansion block connects to the SI unit and allows for sensor input to the auto switches.
Each input block can receive input from up to two or four sensors, and the common can be matched to the sensor by an NPN/PNP selector switch.
Input connectors are available in both M8 and M12 types.

Connector Details



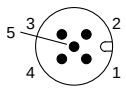
Communication connector
CANopen: Female connector cable: M12 female 5 pins cable with shield (according to ISO11898).

Pos.	Description	Function
1	CAN_SHLD	Shield
2	CAN_V+	Power supply +
3	CAN_GND	Power supply –
4	CAN_H	Bus line (dominant High)
5	CAN_L	Bus line (dominant Low)



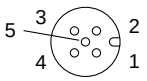
DeviceNet: M12...5 pin (Plug) Example for a cable set with plug / socket:
OMRON Corporation DCA1-5CN05F1. Karl Lumberg GmbH: 0935 253 103/...M, RSC RKC 57* ... M.
Accessories, bus branch Y: Karl Lumberg GmbH: 0906 UTP 101, Hans Turck GmbH: VB2-FKM-FSM57.
Accessories terminating socket with resistor: Hans Turck GmbH: RSE57-TR2, Karl Lumberg GmbH: 0939 CXT 101.

Pos.	Description	Function
1	Drain	Drain / shield
2	V+	Circuit power supply +
3	V–	Circuit power supply –
4	CAN_H	Signal H
5	CAN_L	Signal L

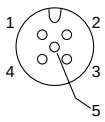


PROFIBUS-DP: M12... 5 pin reserve-keyed (Socket).Example for the corresponding cable sets with plug / socket:
Hans Turck GmbH: RSSW-RKSW456-...M; Karl Lumberg GmbH: 0975 254 101/...M
Accessories Bus branch Y: Hans Turck GmbH: VB2/FSW/FKW/FSW45
Accessories terminating resistor: Hans Turck GmbH: RSS4.5-PDP-TR; Karl Lumberg GmbH: 0979PTX101

Pos.	Description	Function
1	VP	Power supply for terminating resistor
2	A-N	Negative for data transfer / reception
3	DGND	Ground for terminating resistor
4	B-P	Positive for data transfer / reception
5	SHIELD	Shield



Circuit diagram Input module (EX250-IE*)
Input connection: M12 ... 5 pin (Socket)
Example for the cable side connection: OMRON Corporation XS2G;
Karl Lumberg GmbH: Series RST5; Franz Binder GmbH: Series 713,763

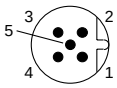


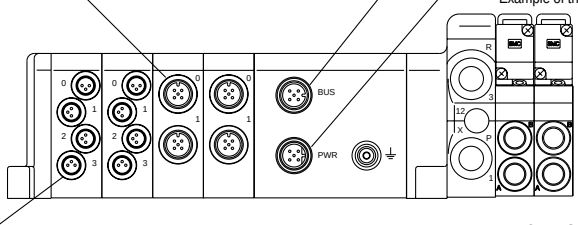
Pos.	Description	Function
1	SW+	Sensor power supply +
2	N.C (SIGNAL)	Open*
3	SW–	Sensor power supply –
4	SIGNAL	Sensor input signal
5	E	Sensor ground connection

* In the 4 input type unit (EX250-IE2), this is the input signal from the second sensor connected.

Power supply
DeviceNet:: M12 ... 5 pin reserve-keyed (Plug)
(The configuration of the connection surface area differs from that of the transmission plug)
Example of the cable set with socket: Hans Turck GmbH: WAKW4.5T-2, Franz Binder GmbH: 79-4449-..-05.

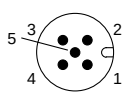
Pos.	Description	Function
1	SV24V	+24V solenoid valve
2	SV0V	0V solenoid valve
3	SW24V	+24V SI and input blocks
4	SW0V	0V SI and input blocks
5	E	Ground connection





PROFIBUS-DP: M12...5 pin (Plug)
Example of the cable set with socket:
SMC: EX500-AP...S (see page 16)

Pos.	Description	Function
1	SV24V	+24V solenoid valve
2	SV0V	0V solenoid valve
3	SW24V	+24V SI and input blocks
4	SW0V	0V SI and input blocks
5	E	Ground connection

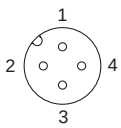


Input connection: M8 ... 3 pin (Socket)
Example for cable side connection: Franz Binder GmbH Series 718, 768
Karl Lumberg GmbH: Series RSMV3

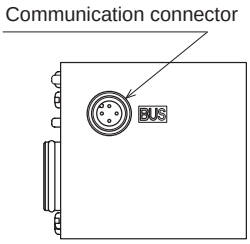
Pos.	Description	Function
1	SW+	Sensor power supply +
3	SW-	Sensor power supply –
4	SIGNAL	Sensor input signal

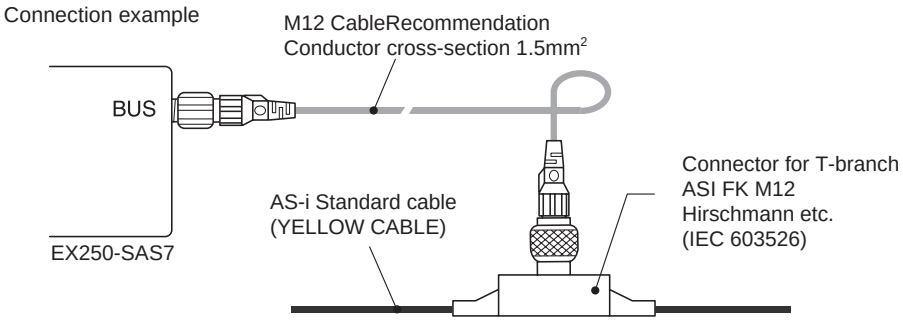
AS-i EX250-SAS7 / EX250-SAS9

Communication connector: M12 male 4pins



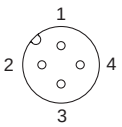
Pos.	Description	Function
1	AS-i +	Positive AS-Interface line
2	RESERVE	RESERVE
3	AS-i –	Negative AS-Interface line
4	RESERVE	RESERVE





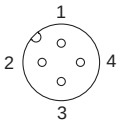
AS-i EX250-SAS3 / EX250-SAS5

Communication connector: M12 male 4pins



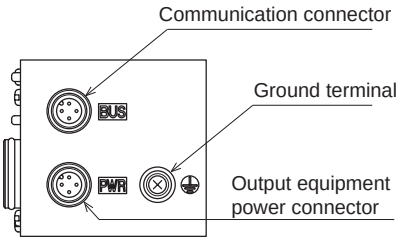
Pos.	Description	Function
1	AS-i +	Positive AS-Interface line
2	0V	Negative output equipment power line
3	AS-i –	Negative AS-Interface line
4	24V	Positive output equipment power line

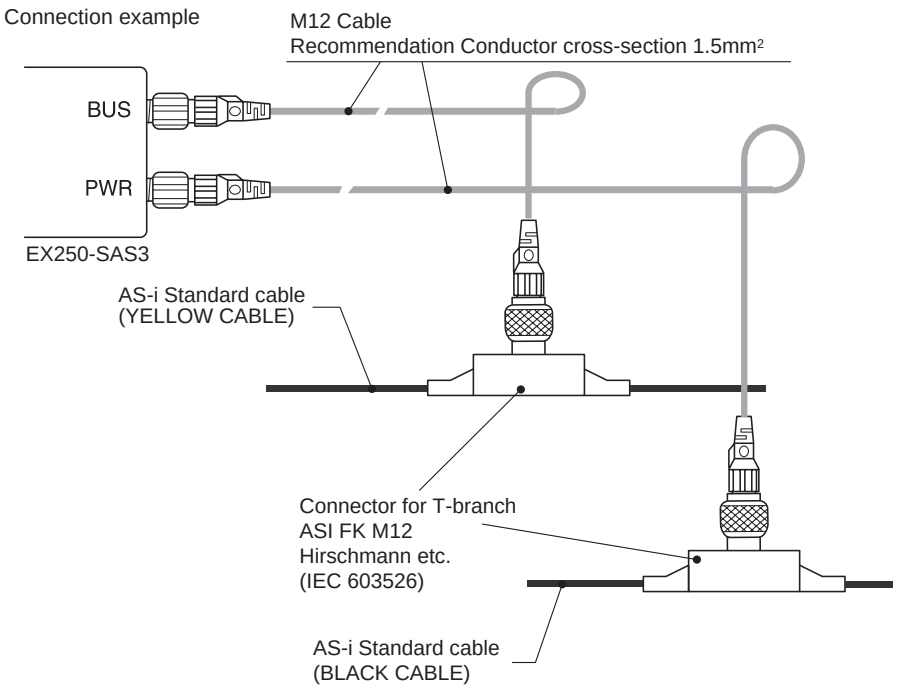
Output equipment power connector: M12 male 4pins



Pos.	Description	Function
1	24V	Positive output equipment power line
2	NC	Not connected
3	0V	Negative output equipment power line
4	NC	Not connected

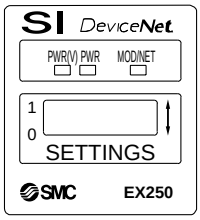
*Connected inside the SI unit.





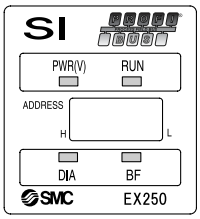
Indicator Unit (LED) Description and Function

■ SI unit
DeviceNet (EX250-SDN1)



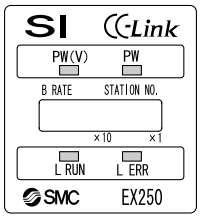
Name	Function
PWR(V)	ON when solenoid valve power supply is turned ON.
PWR	ON when DeviceNet circuit power supply input is turned ON.
MOD/NET	OFF: Power supply off, off line, or when checking duplication of MAC_ID.
	GREEN BLINKING: Waiting for connection (on line).
	GREEN ON: Connection established (on line).
	RED BLINKING: Connection time out (minor communication abnormality).
	RED ON: MAC_ID duplication error, or BUSOFF error (major communication abnormality).

■ PROFIBUS-DP (EX250-SPR1)



Name	Function
PWR(V)	GREEN ON when solenoid valve power supply is turned ON. GREEN OFF when the power supply voltage is less than 19 V.
RUN	GREEN ON when operating (SI unit power supply is ON).
DIA	RED ON when self diagnosis device detects abnormality.
BF	RED ON for BUS abnormality.

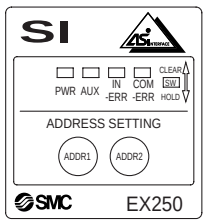
■ CC-Link (EX250-SMJ2)



Name	Function
PW	ON: Input and control unit power supply ON. OFF: Input and control unit power supply OFF.
PW(V)	ON: Solenoid valve power supply ON. OFF: Solenoid valve power supply voltage is less than 19 V.
L RUN	ON: Normal traffic OFF: Traffic disconnected (Timeover error)
L ERR	ON: Traffic error BLINKING: Station or baud rate switch is set while the power supply is ON. OFF: Normal traffic

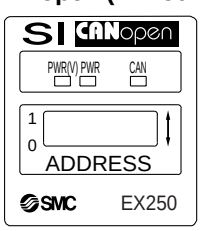
When the data link is normal, PW, PW (V) and L RUN are ON.

■ AS-i (EX250-SAS□)



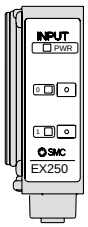
Name	LED Condition	Contents
PWR	Green Light	In time of power supply for AS-Interface line is turned on.
AUX	Green Light	In time of auxiliary power supply for output equipment is turned on.
IN-ERR	Red Light	In time of input power is detected over current. (Lights off at normal condition)
COM-ERR	Red Light	In time of communication error. (Lights off at normal condition)
	Red Blink	In time of peripheral equipment error. (Over current of input power, blowing the fuse etc.)

■ SI unit
CANopen (EX250-SCA1)

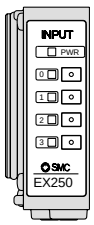


Name	LED Condition	Contents
PWR(V)	Green Light	Illuminates when power for solenoid valves is supplied
PWR	Green Light	Illuminates when power for CANopen line is supplied
CAN	Green Light	Illuminates when SI unit is in the Operational state
	Green Light (blinking)	SI unit is in the Pre-Operational state
	Green Light (single flash)	Single flash when SI unit is in Stopped state
	Red Light (single flash)	Single flash when CAN controller error occurs
	Red Light (double flash)	Double flash when Error Control Event occurs
	Green/Red Light (flickering)	Flickering when SI unit is in Configuration mode (LSS services)
	Red Light	Red Light SI unit is in “Bus OFF” state

■ Input block (EX250-IE1/2/3)



2-input type (EX250-IE1)

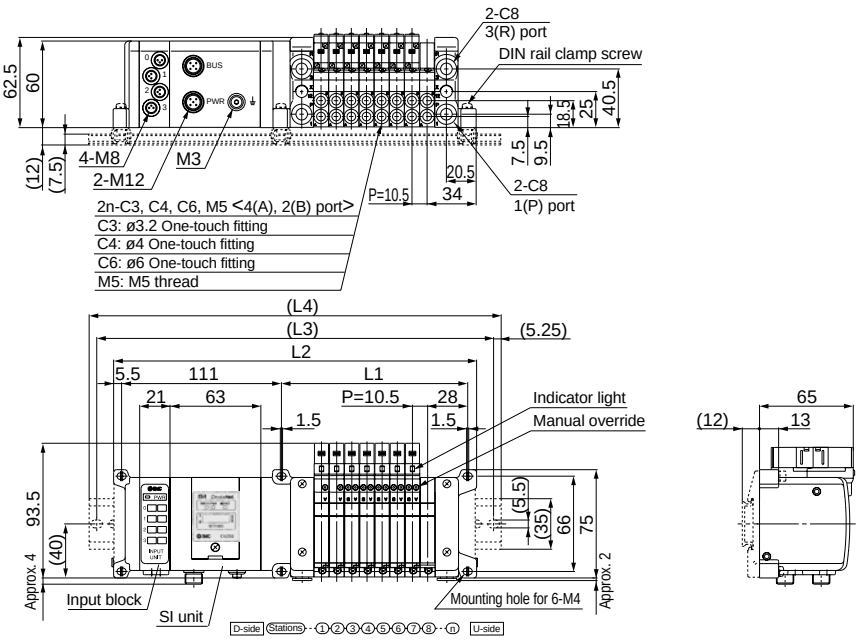


4-input type (EX250-IE2/3)

Description	Function
PWR	ON when sensor power is turned ON.
0 to 1(3)	ON when each sensor input goes ON.

∗ Contact your SMC representative for specifications and handling precautions.

VV5QC11 S Kit (Serial Transmission Kit: EX250)



Formulas
L1 = 10.5n + 45 (Maximum 24 single wiring stations)
∗ L2: For one input block. Add 21 mm for each additional input block.

n: Stations

L \ n	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

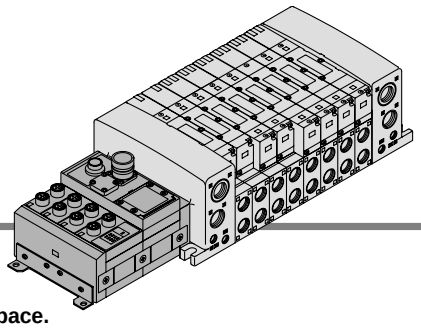
S VQC4000
Kit (Serial Transmission Kit) for I/O Conforms to IP65



Compatible network DeviceNet/PROFIBUS-DP

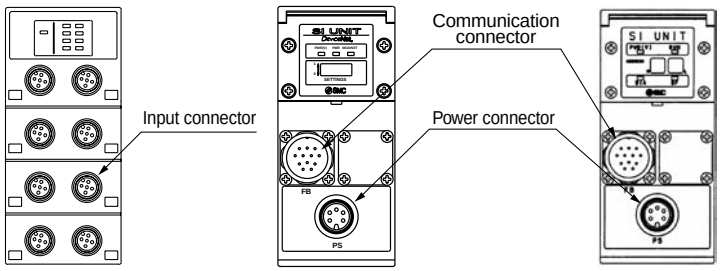
• The serial transmission system greatly reduces connection work, minimizes wiring, and saves space.

DeviceNet/PROFIBUS-DP compatible SI unit
As a DeviceNet/PROFIBUS-DP slave unit, this kit is capable of solenoid valve ON and OFF control up to 32 points.
Furthermore, by connecting an input block, up to 32 sensor signal inputs are possible.

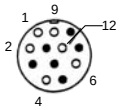
Input block
This expansion block connects to the SI unit and allows for sensor input to the auto switches.
Each input block can receive input from up to 8 sensors, and the common can be matched to the sensor by an NPN/PNP selector switch.

Connector Details

Input block **SI unit (DeviceNet)** **SI unit (PROFIBUS-DP)**



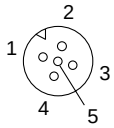
• Communication connector (PROFIBUS-DP): CONINVERS® RC-2RS1N12, 12 pins
Cable side connector example: Siemens AG 6ES5 760-2CB11



No.	Description	Function
1	M5V	GND Terminal
2	A	Signal –N
4	B	Signal –P
6	+5V	Terminal +5V
9	SHIELD	Shield ground
12	RTS	Optical fiber (reserve)

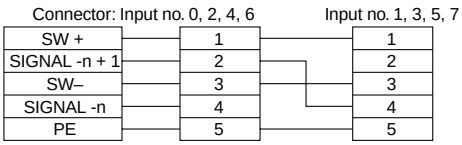
• Pin no. 3, 5, 7, 8, 10 and 11 marked with "●" are open.
∗ The connector configuration and the pin arrangement are compatible with Siemens AG ET200C.

• Input connector: M12, 5 pins (OMRON Corporation XS2F compatible) x 8 pcs.
Cable side connector example: OMRON Corporation XS2G

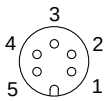


No.	Description	Function
1	SW +	(+) Sensor power supply
2	N.C.	Open∗
3	SW –	(–) Sensor power supply
4	SIGNAL	Sensor input signal
5	PE	Protective sensor ground

∗ The second pin of the connector with input no. 0, 2, 4, 6 (the connector at the right side of the input block) is connected internally to the fourth pin (sensor input no.) of the connector with input no. 1, 3, 5, 7. This makes it possible to directly input two inputs that are combined together by the common connector.

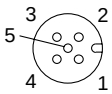


• Power connector: Franz Binder GmbH Series723, 5 pins (72309-0115-80-05)
Cable side connector example: Franz Binder GmbH 72309-0114-70-15, etc.
∗ DIN type 5 pins



No.	Description	Function
1	SV24V	For solenoid valve +24V
2	SV0V	For solenoid valve +0V
3	PE	Protective ground
4	SW24V	For solenoid valve +24V
5	SW0V	For solenoid valve +0V

• Communication connector (DeviceNet): M12, 5 pins (for DeviceNet only)
Example of corresponding cable assemblies with connector:
OMRON Corporation DCA1-5CN05F1, Karl Lumberg GmbH & Co. KG RKT5-56.



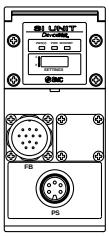
No.	Description	Function
1	Drain	Drain/Shield
2	V +	(+) Circuit power supply
3	V –	(–) Circuit power supply
4	CAN_H	Signal H
5	CAN_L	Signal L

Compatible with DeviceNet specification Micro Style connector.

⚠Caution
When IP65 or equivalent enclosures are required, install a waterproof cover on the input connector that is not being used. Order waterproof covers separately.
Example: OMRON Corporation XS2Z-12

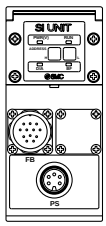
Indicator Unit (LED) Descriptions and Functions

■ SI unit (DeviceNet)



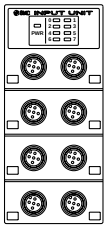
Description	Function
PWR(V)	ON when solenoid valve power supply is turned ON.
PWR	ON when DeviceNet circuit power supply input is turned ON.
MOD/NET	OFF: Power supply off, off line, or when checking duplication of MAC_ID.
	GREEN BLINKING: Waiting for connection (on line).
	GREEN ON: Connection established (on line).
	RED BLINKING: Connection time out (minor communication abnormality).
	RED ON: MAC_ID duplication error, or BUSOFF error (major communication abnormality).

■ SI unit (PROFIBUS-DP)



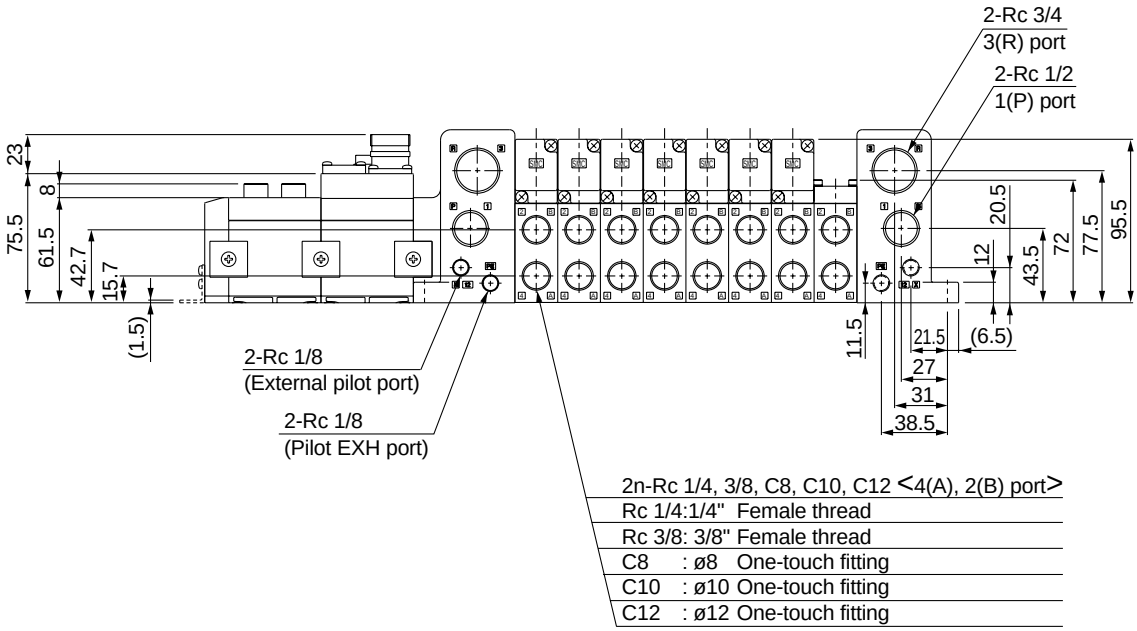
Description	Function
PWR(V)	ON when solenoid valve power supply is turned ON. OFF when the power supply voltage is less than 19V.
RUN	ON when operating (SI unit power supply is ON).
DIA	ON when self diagnosis device detects abnormality.
BF	ON for BUS abnormality.

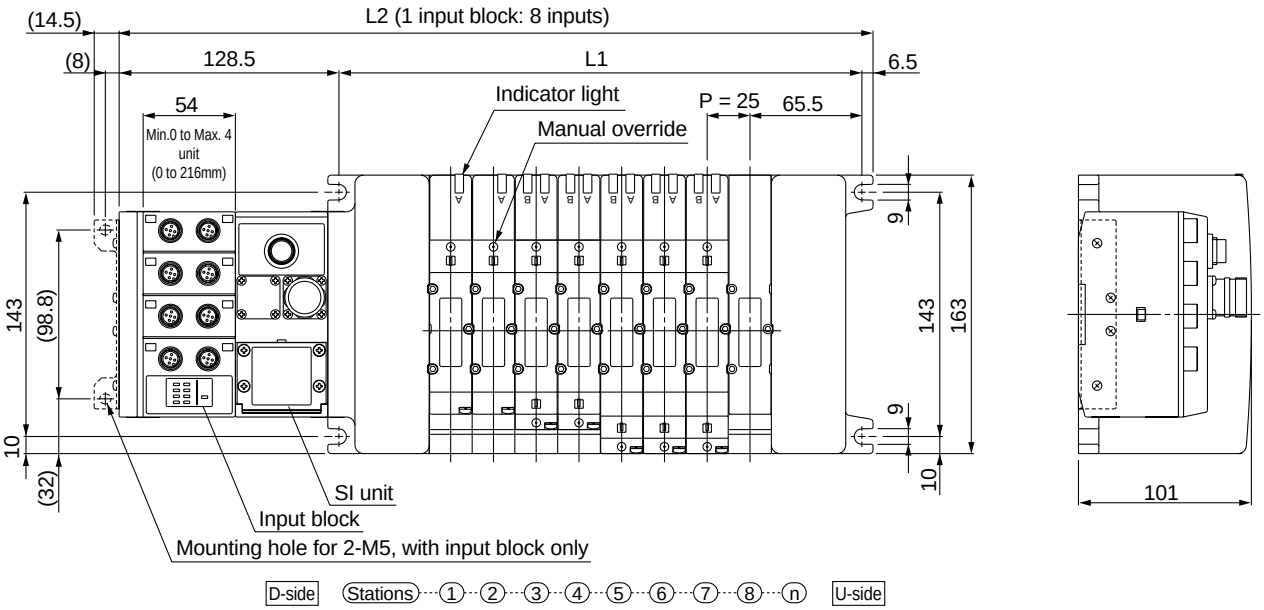
■ Input block



Description	Function
PWR	ON when sensor power is turned ON. OFF when short circuit protection is working.
0 to 7	ON when each sensor input goes ON.

VV5QC41
S Kit (Serial Transmission Kit: EX240)





Formulas: L1 = 25n + 106, L2 = 25n + 241 (for 1 input block. For each additional input block, add 54mm.) n: Stations (maximum 16 stations)

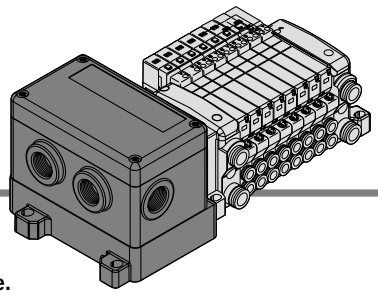
S VQC1000/2000/4000
Kit (Serial Transmission Kit) for I/O Conforms to IP67

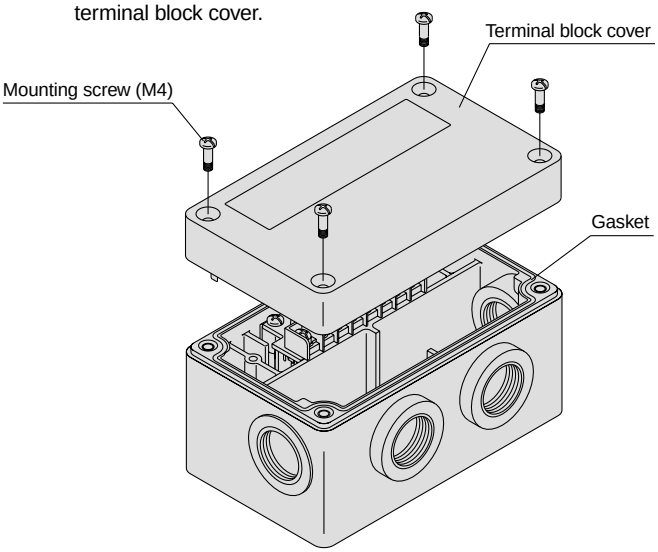


Compatible network CC-Link

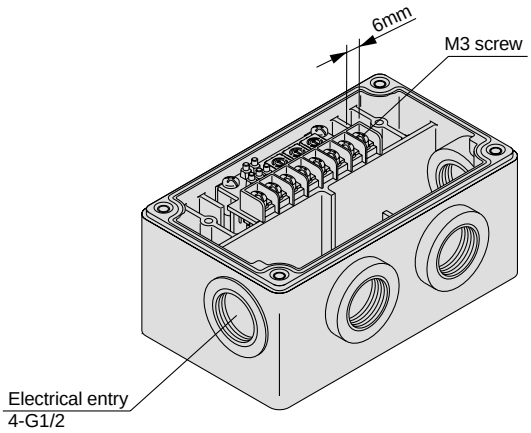
• The serial transmission system greatly reduces connection work, minimizes wiring, and saves space.

Terminal Block Connection

Step 1. How to remove terminal block cover
Loosen the 4 mounting screws (M4) and remove the terminal block cover.



Step 2. Wire the cables according to the terminal block specifications below. Pay attention to the wire bound positions.



Step 3. How to replace the terminal block cover
Securely tighten the screws to the torque shown in the table below, after confirming that the gasket is installed correctly.

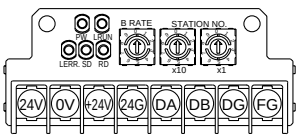
Proper tightening torque (N·m)
0.7 to 1.2

• Applicable crimp terminal (fork tongue type): 1.25-3S, 1.25Y-3
1.25Y-3N, 1.25Y-3.5

∗ For detailed specifications and handling, refer to the operation manual provided by SMC.

Terminal block details

• Terminal block LED descriptions



Description	Function
PW	ON when transmission power supply is ON. OFF when transmission power supply is OFF.
L RUN	ON when normal data is received.
SD	ON when data is sent.
RD	ON when data is received.
L ERR.	ON for transmission error and incorrect settings. BLINKING for change in station or transmission speed settings.

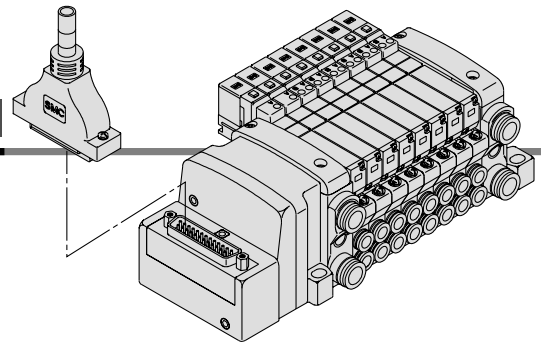
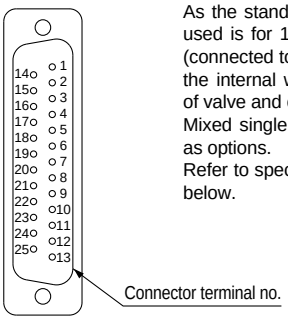
F VQC1000/2000/4000
Kit (D-sub Connector Kit) Conforms to IP40



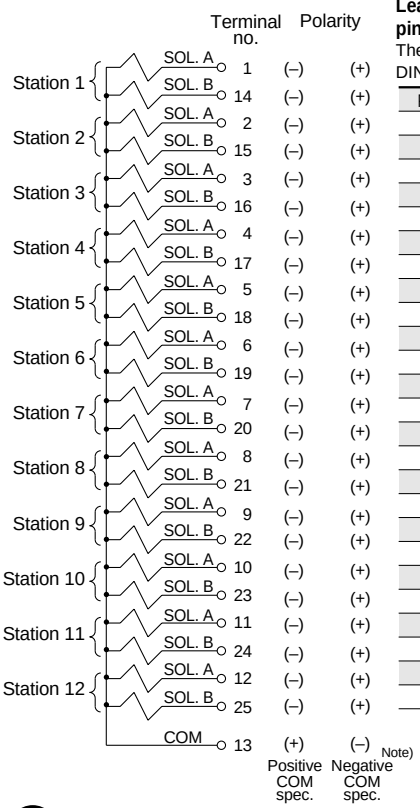
- Using our D-sub connector for electrical connections greatly reduces labour, while it also minimizes wiring and saves space.
- We use a D-sub connector (25P) that conforms to MIL standards and is therefore widely compatible with many standard commercial models.
- Top or side entry for the connector can be changed freely, allowing for changes even after mounting, to meet any changing needs for space.

Electrical wiring specifications

D-sub connector



As the standard electrical wiring specification used is for 12 stations or less, double wiring (connected to SOL. A and SOL. B) is used for the internal wiring of each station regardless of valve and option types.
Mixed single and double wiring are available as options.
Refer to special wiring specifications (options) below.



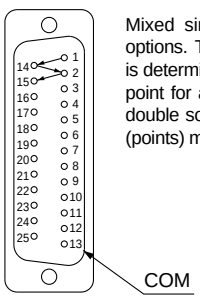
Lead wire colours according to pin numbers
The colour code is according to DIN47100.

Pin no.	Cable colour	Identification
1	white	–
2	brown	–
3	green	–
4	yellow	–
5	grey	–
6	pink	–
7	blue	–
8	red	–
9	black	–
10	violet	–
11	grey	pink
12	red	blue
13	white	green
14	brown	green
15	white	yellow
16	yellow	brown
17	white	grey
18	grey	brown
19	white	pink
20	pink	brown
21	white	blue
22	brown	blue
23	white	red
24	brown	red
25	white	black

Note) When using the negative COM specification for VQC1000/2000, use valves for negative COM.

Special wiring specifications (options)

(For 25P)



Mixed single and double wiring are available as options. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 24.

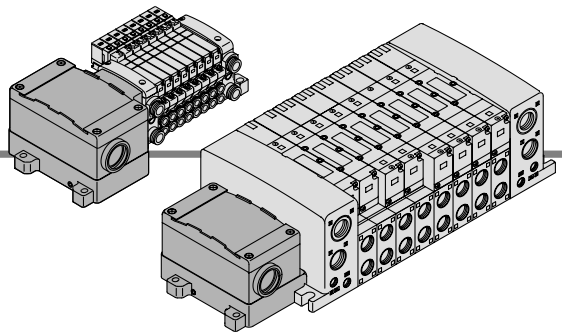
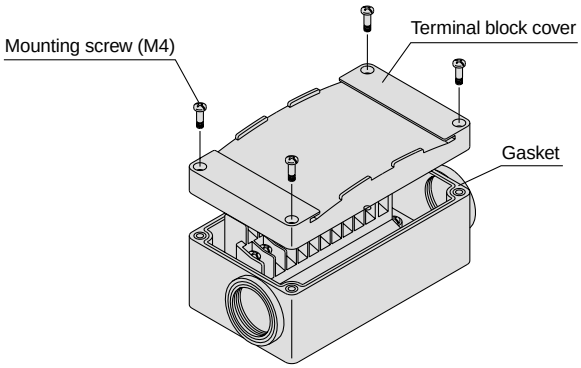
T VQC1000/2000/4000
Kit (Terminal Block Box Kit) Conforms to IP67



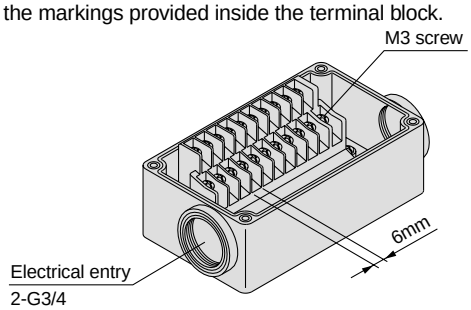
• **This kit has a small terminal block inside a junction box. The provision of a G3/4 electrical entry allows connection of conduit fittings.**

Terminal Block Connection

Step 1. How to remove terminal block cover
Loosen the 4 mounting screws (M4) and remove the terminal block cover.



Step 2. The diagram below shows the terminal block wiring. All stations are provided with double wiring regardless of the valves which are mounted.
Connect each wire to the power supply side, according to the markings provided inside the terminal block.



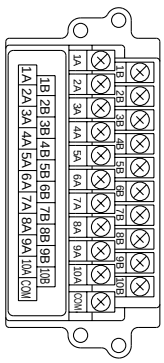
Step 3. How to replace the terminal block cover
Securely tighten the screws to the torque shown in the table below, after confirming that the gasket is installed correctly.

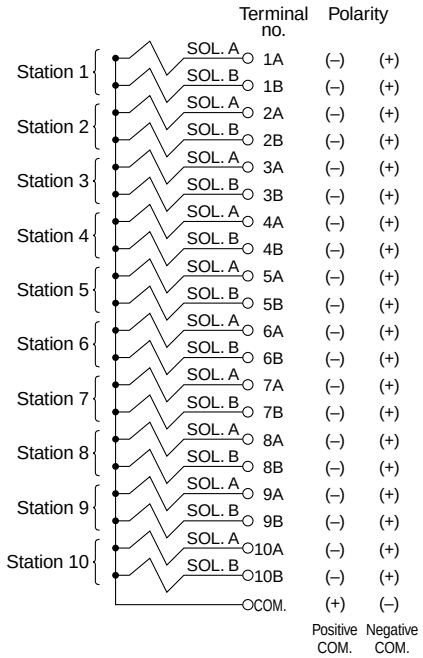
Proper tightening torque (N·m)
0.7 to 1.2

• Applicable crimp terminal (fork tongue type): 1.25-3S, 1.25Y-3
1.25Y-3N, 1.25Y-3.5

Electrical wiring specifications (conforms to IP67)

Standard wiring





The internal wiring is double (connected to SOL. A and SOL. B) for all stations regardless of the type of valve or options.
Mixed single and double wiring are available as options.

Note) When using the negative COM. specification for VQC1000/2000, use valves for negative COM.

Special wiring specifications (options)

Mixed single and double wiring are available as options. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 20.

1. How to order
Indicate option symbol "**-K**" in the manifold part number and be sure to specify station positions for single or double wiring on the manifold specification sheet.

2. Wiring specifications
Connector terminal numbers are connected from solenoid station 1 on the A side in the order indicated by the arrows without skipping any terminal numbers.

Station 11	SOL. A	11	(–)	(+)	White	Red
	SOL. B	24	(–)	(+)	Black	White
Station 12	SOL. A	12	(–)	(+)	Yellow	Red
	SOL. B	25	(–)	(+)	White	None
	COM.	13	(+) Positive COM. spec.	(–) Negative COM. spec. Note)	Orange	Red

Note) When using the negative COM. specification for VQC1000/2000, use valves for negative COM.

Lead wire length

VV5QC11−08 C6 LD 0

Lead wire length

0	0.6m
1	1.5m
2	3.0m

Electrical characteristics

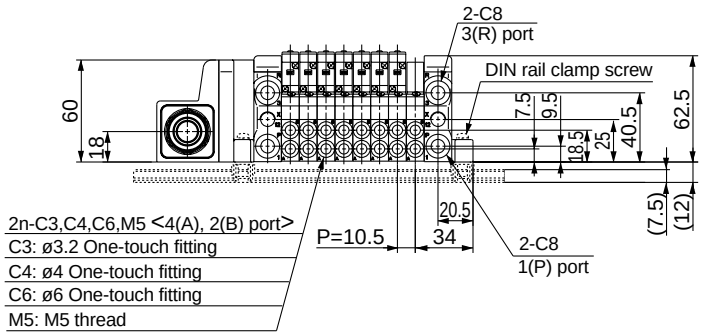
Item	Characteristic
Conductor resistance Ω/km, 20°C	65 or less
Withstand pressure V, 1 minute, AC	1000
Insulation resistance MΩ/km, 20°C	5 or more

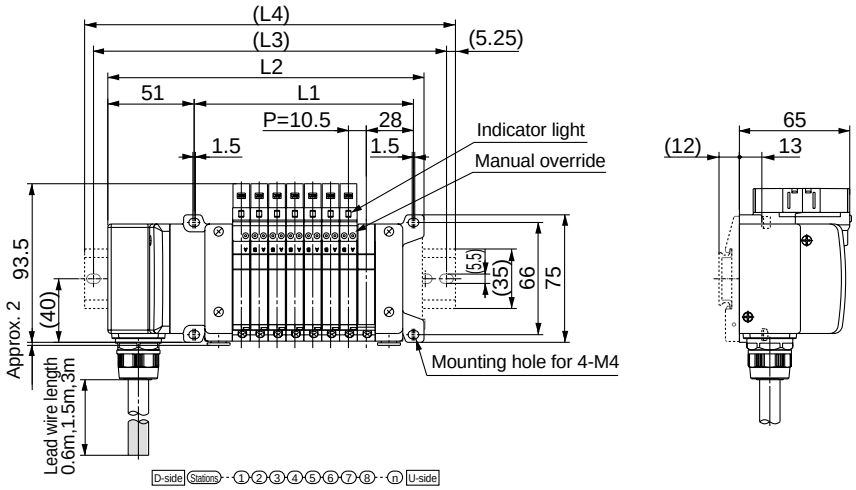
Note) Cannot be used for transfer wiring.
The minimum bending radius for cables is 20mm.

Special wiring specifications (options)

Mixed single and double wiring are available as options. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 24.

VV5QC11





Formulas
L1 = 10.5n + 45 (Maximum 24 single wiring stations)
L2 = 10.5n + 102

n: Stations

L \ n	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
L1	55.5	66	76.5	87	97.5	108	118.5	129	139.5	150	160.5	171	181.5	192	202.5	213	223.5	234	244.5	255	265.5	276	286.5	297
L2	112.5	123	133.5	144	154.5	165	175.5	186	196.5	207	217.5	228	238.5	249	259.5	270	280.5	291	301.5	312	322.5	333	343.5	354
L3	137.5	150	162.5	175	175	187.5	200	212.5	225	237.5	237.5	250	262.5	275	287.5	300	300	312.5	325	337.5	350	362.5	375	375

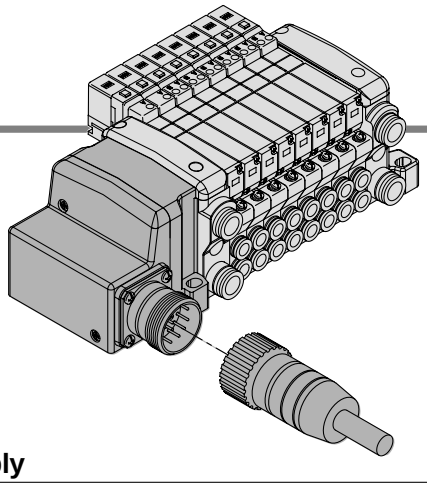
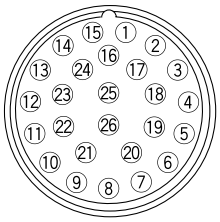
M VQC1000/2000/4000
Kit (Multiple Connector Kit) Conforms to IP67



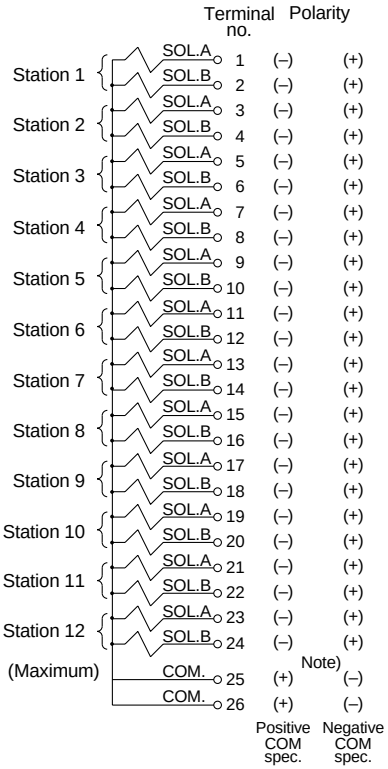
- Use of multiple connectors helps streamline wiring procedure to save labour.
- IP67 enclosure is available with use of waterproof multiple connectors.

Electrical wiring specifications

Multiple connector



Double wiring(connected to SOL.A and SOL.B) is used for the internal wiring of each staion regardless of valve and option types. Mixed single and double wiring are available as options. Refer to special wiring specifications(options) below.



Note) When using the negative COM specification for VQC1000/2000, use valves for negative COM.

Special wiring specifications (options)

Mixed single and double wiring are available as an option. The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. The total number of solenoids (points) must not exceed 24.

Cable assembly

■ Circular connector cable assembly (26 pin)

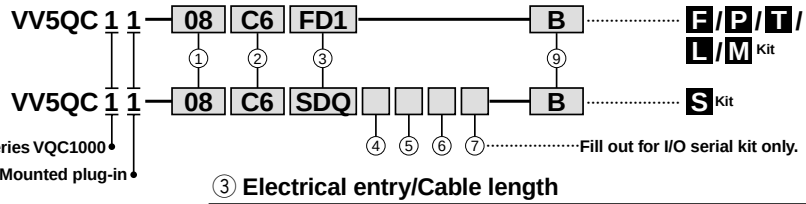
Manifold Specification Sheet

Series VQC1000: Base-Mounted Type/Plug-in Unit

❶ How to order manifolds



① Stations

01	1 station
⋮	⋮

The maximum number of stations differs depending on the electrical entry. Refer to ③.

② Cylinder port size

C3	With ø3.2 One-touch fitting
C4	With ø4 One-touch fitting
C6	With ø6 One-touch fitting
M5	M5 thread
CM	Mixed sizes and with port plug
L3	Top ported elbow Wtih ø3.2 One-touch fitting
L4	Top ported elbow With ø4 One-touch fitting
L6	Top ported elbow With ø6 One-touch fitting
L5	M5 thread
B3	Bottom ported elbow With ø3.2 One-touch fitting
B4	Bottom ported elbow With ø4 One-touch fitting
B6	Bottom ported elbow With ø6 One-touch fitting
B5	M5 thread
LM	Elbow port, mixed sizes

Note 1) Indicate the size in the specification sheet in the case of CM and LM.

Note 2) Symbols for inch sizes are as follows:

<For One-touch fittings>

N1: ø1/8"
N3: ø5/32"
N7: ø1/4"
NM: Mixed

The top ported elbow is LN□ and the bottom ported elbow is BN□.

③ Electrical entry/Cable length

	D-side entry	Kit, Cable length	Stations Note 2)
F Kit	FD0	D-sub connector kit (25P) without cable	1 to 12 (24)
	FD1	D-sub connector kit (25P) with 1.5m cable	
	FD2	D-sub connector kit (25P) with 3.0m cable	
	FD3	D-sub connector kit (25P) with 5.0m cable	
P Kit	PD0	Flat ribbon cable kit (26P) without cable	1 to 12 (24)
	PD1	Flat ribbon cable kit (26P) with 1.5m cable	
	PD2	Flat ribbon cable kit (26P) with 3.0m cable	
	PD3	Flat ribbon cable kit (26P) with 5.0m cable	
	PDC	Flat ribbon cable kit (20P) without cable Note 1)	1 to 9 (18)
T Kit	TD0	Terminal block box kit	1 to 10 (20)
L Kit	LD0	Lead wire kit (25 core) 0.6 m lead wire	1 to 12 (24)
	LD1	Lead wire kit (25 core) 1.5 m lead wire	
	LD2	Lead wire kit (25 core) 3.0 m lead wire	
M Kit	MD0	Multiple connector kit (26P) without cable	1 to 12 (24)
	MD1	Multiple connector kit (27P) with 1.5 m cable	
	MD2	Multiple connector kit (27P) with 3.0 m cable	
	MD3	Multiple connector kit (27P) with 5.0 m cable	
S Kit	**Decentralized wiring serial kit (EX500)**		1 to 8 (16)
	SD0A	Serial kit without SI unit	
	SDA1	Serial kit for Remote I/O	
	SDA2	Serial kit for DeviceNet/PROFIBUS-DP/CC-Link	
	Input/Output serial kit (EX250)		1 to 12 (24)
	SD0	Serial kit without SI unit	
	SDQ	Serial kit DeviceNet compatible	
	SDN	Serial kit PROFIBUS-DP compatible	
	SDV	Serial kit CC-Link compatible	
	SDY	Serial kit CANopen compatible	
	SDTA	AS-i, 8 in/8 out, 31 slave modes, 2 power supply	1 to 4 (8)
	SDTB	AS-i, 4 in/4 out, 31 slave modes, 2 power supply	1 to 2 (4)
	SDTC	AS-i, 8 in/8 out, 31 slave modes, 1 power supply	1 to 4 (8)
	SDTD	AS-i, 4 in/4 out, 31 slave modes, 1 power supply	1 to 2 (4)
	Output serial transmission kit (EX126)		1 to 8 (16)
	SDVB	Serial kit CC-Link compatible	

Note 1) P Kit: Order the cable assembly separately for the type 20P.

Note 2) Numbers inside ( ) indicate the maximum number of solenoids for mixed single and double wiring. The maximum number of stations is determined by the total number of solenoids. In the case of mixed wiring, use the option symbol "-K".

④ SI unit COM.

SI unit COM		EX250					EX500				EX126
		DeviceNet	PROFIBUS-DP	CC-Link	AS-i	CANopen	DeviceNet	PROFIBUS-DP	CC-Link	Remote I/O	CC-Link
Nil	+COM	—	—	○	—	—	○	○	○	○	○
N	–COM	○	○	—	○	○	○	○	○	○	—

Note) Leave the box blank for the SI unit COM without SI unit (SD0).

⑤ Input block (Fill out for I/O unit only)

Nil	Without SI unit/input block (SD0)
0	Without input block
1	With 1 input block
⋮	⋮
8	With 8 input blocks

⑥ Input block type (Fill out for I/O unit only)

Nil	Without input block
1	M12, 2 inputs
2	M12, 4 inputs
3	M8, 4 inputs (3 pins)

⑦ Input block COM. (Fill out for I/O unit only)

Nil	PNP (+) or without SI unit/input block
N	NPN (–)

⑨ Options

Nil	None
B	All stations with back pressure check valve Note 1)
D	With DIN rail (rail length: standard)
D□	With DIN rail (rail length: special) Note 2)
K	Special wiring specifications Note 3) (except for double wiring)
N	With name plate
R	External pilot Note 4)
S	Direct exhaust with built-in silencer Note 5)

∗ When specifying more than one option, enter symbols in alphabetical order. Example: -BRS

Note 1) When using the back pressure check valve for the necessary stations only, enter the back pressure check valve part no. and indicate the number of manifold stations in the specification sheet.

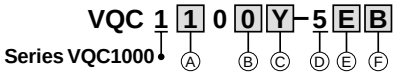
Note 2) For special DIN rail length, indicate "D□." (Enter the number of stations inside □).
Example: -D08
In this case, stations will be mounted on a DIN rail for 8 stations regardless of the actual number of manifold stations.
The specified number of stations must be larger than the number of stations on the manifold.
Indicate "-D0" for the option without DIN rail.

Note 3) Be sure to indicate the wiring specifications in the specification sheet.

Note 4) For external pilot option, "-R", indicate the external pilot specification "R" for the applicable valves as well.

Note 5) The built-in silencer type does not satisfy the IP67 standard.

❷ How to order applicable valves



Ⓐ Type of actuation

1	2-position single
2	2-position double
3	3-position closed centre
4	3-position exhaust centre
5	3-position pressure centre
A Note)	Dual 3-port valve (N.C. + N.C.)
B Note)	Dual 3-port valve (N.O. + N.O.)
C Note)	Dual 3-port valve (N.C. + N.O.)

Note) Available for the rubber seal type only.

Ⓑ Seal type

0	Metal seal

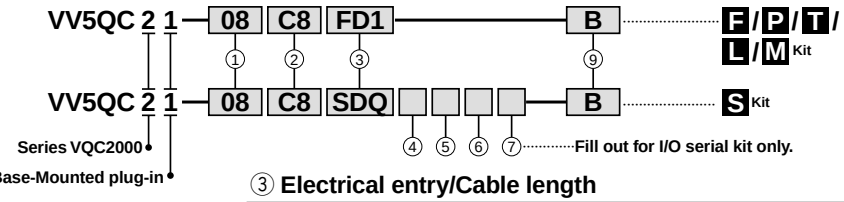
Series VQC2000: Base-Mounted Type/Plug-in Unit

❶ How to order manifolds



① Stations

01	1 station
⋮	⋮

The maximum number of stations differs depending on the electrical entry. Refer to ③.

② Cylinder port size

C4	With ø4 One-touch fitting
C6	With ø6 One-touch fitting
C8	With ø8 One-touch fitting
CM	Mixed or with port plug
L4	Top ported elbow With ø4 One-touch fitting
L6	Top ported elbow With ø6 One-touch fitting
L8	Top ported elbow With ø8 One-touch fitting
B4	Bottom ported elbow With ø4 One-touch fitting
B6	Bottom ported elbow With ø6 One-touch fitting
B8	Bottom ported elbow With ø8 One-touch fitting
LM	Elbow port, mixed sizes

Note 1) Indicate the size in the specification sheet in the case of CM and LM.

Note 2) Symbols for inch sizes are as follows:

<For One-touch fittings>

N3: ø5/32"

N7: ø1/4"

N9: ø5/16"

NM: Mixed

The top ported elbow is LN□ and the bottom ported elbow is BN□.

③ Electrical entry/Cable length

	D-side entry	Kit, Cable length	Stations Note 2)
F Kit	FD0	D-sub connector kit (25P) without cable	1 to 12 (24)
	FD1	D-sub connector kit (25P) with 1.5m cable	
	FD2	D-sub connector kit (25P) with 3.0m cable	
	FD3	D-sub connector kit (25P) with 5.0m cable	
P Kit	PD0	Flat ribbon cable kit (26P) without cable	1 to 12 (24)
	PD1	Flat ribbon cable kit (26P) with 1.5m cable	
	PD2	Flat ribbon cable kit (26P) with 3.0m cable	
	PD3	Flat ribbon cable kit (26P) with 5.0m cable	
	PDC	Flat ribbon cable kit (20P) without cable Note 1)	1 to 9 (18)
T Kit	TD0	Terminal block box kit	1 to 10 (20)
L Kit	LD0	Lead wire kit (25 core) 0.6 m lead wire	1 to 12 (24)
	LD1	Lead wire kit (25 core) 1.5 m lead wire	
	LD2	Lead wire kit (25 core) 3.0 m lead wire	
M Kit	MD0	Multiple connector kit (26P) without cable	1 to 12 (24)
	MD1	Multiple connector kit (27P) with 1.5 m cable	
	MD2	Multiple connector kit (27P) with 3.0 m cable	
	MD3	Multiple connector kit (27P) with 5.0 m cable	
S Kit		**Decentralized wiring serial kit (EX500)**	1 to 8 (16)
	SD0A	Serial kit without SI unit	
	SDA1	Serial kit for Remote I/O	
	SDA2	Serial kit for DeviceNet/PROFIBUS-DP/CC-Link	
		Input/Output serial kit (EX250)	1 to 12 (24)
	SD0	Serial kit without SI unit	
	SDQ	Serial kit DeviceNet compatible	
	SDN	Serial kit PROFIBUS-DP compatible	
	SDV	Serial kit CC-Link compatible	
	SDY	Serial kit CANopen compatible	
	SDTA	AS-i, 8 in/8 out, 31 slave modes, 2 power supply	1 to 4 (8)
	SDTB	AS-i, 4 in/4 out, 31 slave modes, 2 power supply	1 to 2 (4)
	SDTC	AS-i, 8 in/8 out, 31 slave modes, 1 power supply	1 to 4 (8)
	SDTD	AS-i, 4 in/4 out, 31 slave modes, 1 power supply	1 to 2 (4)
		Output serial transmission kit (EX126)	1 to 8 (16)
	SDVB	Serial kit CC-Link compatible	

Note 1) P Kit: Order the cable assembly separately for the type 20P.

Note 2) Numbers inside ( ) indicate the maximum number of solenoids for mixed single and double wiring. The maximum number of stations is determined by the total number of solenoids. In the case of mixed wiring, use the option symbol "-K".

④ SI unit COM.

SI unit COM		EX250					EX500				EX126
		DeviceNet	PROFIBUS-DP	CC-Link	AS-i	CANopen	DeviceNet	PROFIBUS-DP	CC-Link	Remote I/O	CC-Link
Nil	+COM	—	—	○	—	—	○	○	○	○	○
N	–COM	○	○	—	○	○	○	○	○	○	—

Note) Leave the box blank for the SI unit COM without SI unit (SD0).

⑤ Input block (Fill out for I/O unit only)

Nil	Without SI unit/input block (SD0)
0	Without input block
1	With 1 input block
⋮	⋮
8	With 8 input blocks

⑥ Input block type (Fill out for I/O unit only)

Nil	Without input block
1	M12, 2 inputs
2	M12, 4 inputs
3	M8, 4 inputs (3 pins)

⑦ Input block COM. (Fill out for I/O unit only)

Nil	PNP (+) or without SI unit/input block
N	NPN (–)

⑨ Options

Nil	None
B	All stations with back pressure check valve Note 1)
D	With DIN rail (rail length: standard)
D□	With DIN rail (rail length: special) Note 2)
K	Special wiring specifications Note 3) (except for double wiring)
N	With name plate
R	External pilot Note 4)
S	Direct exhaust with built-in silencer Note 5)
T	Branched P and R ports on U side Note 6)

∗ When specifying more than one option, enter symbols in alphabetical order. Example: -BRS

Note 1) When using the back pressure check valve for the necessary stations only, enter the back pressure check valve part no. and indicate the number of manifold stations in the specification sheet.

Note 2) For special DIN rail length, indicate "D□." (Enter the number of stations inside □.)
Example: -D08
In this case, stations will be mounted on a DIN rail for 8 stations regardless of the actual number of manifold stations.
The specified number of stations must be larger than the number of stations on the manifold.
Indicate "-D0" for the option without DIN rail.

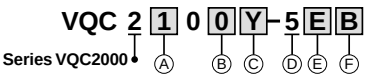
Note 3) Be sure to indicate the wiring specifications in the specification sheet.

Note 4) For external pilot option, "-R", indicate the external pilot specification "R" for the applicable valves as well.

Note 5) The built-in silencer type does not satisfy the IP67 standard.

Note 6) The SUP and EXH ports on U side are branched (toward the cylinder port and coil) with ø12 one-touch fittings for connection.

❷ How to order applicable valves



Ⓐ Type of actuation

1	2-position single
2	2-position double
3	3-position closed centre
4	3-position exhaust centre
5	3-position pressure centre
A Note)	Dual 3-port valve (N.C. + N.C.)
B Note)	Dual 3-port valve (N.O. + N.O.)
C Note)	Dual 3-port valve (N.C. + N.O.)

Note) Available for the rubber seal type only.

Ⓑ Seal type

0	Metal seal
1	Rubber seal

Ⓒ Function

Nil	Standard type (1W)
K Note 1)	High voltage type (1.0MPa)
N	Negative COM.
R Note 2)	External pilot
Y	Low wattage type (0.5W)

∗ When specifying more than one option, enter symbols in alphabetical order.

Note 1) Available for the metal seal type only.

Note 2) Not applicable to Dual 3-port valve.

Ⓓ Coil voltage

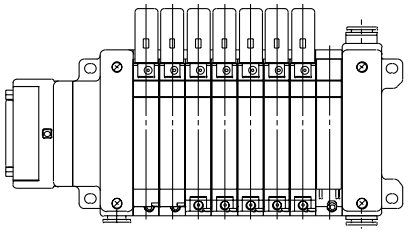
5	24VDC Note)
6	12VDC

Note) S kit is only available for 24VDC.

Ⓔ Light/Surge voltage suppressor

Nil	With
E	Without Note)

Note) Not applicable to S Kit.



D-side Stations····1····2····3····4····5····6····7····8····n U-side

∗ Stations are numbered in ascending order from the D-side.

Ⓕ Manual override

Flow Characteristics of Solenoid Valve
(How to Express Flow Characteristics)

1. Express of Flow Characteristics

Table 1 shows the applicable International designation of flow characteristics in the specificatoin section of a solenoid valve or any other types of equipment.

Table 1 Designation of flow characteristics

Equipment	Designation based on international standards	Other designation	Applicable standards
Pneumatics equipment	C, b		ISO 6358: 1989 JIS B 8390: 2000
		S	JIS B 8390: 2000 Equipment: JIS B 8373, 8374, 8375, 8379, 8381
		Cv	ANSI/(NFPA)T3.21.3: 1990

2. Pneumatic Equipment

2-1 Calculating flow rate according to International Standards

(1)Flow rate calculation formula

The flow rate calculation formula is defined as follows:

If $\frac{P_2+0.1}{P_1+0.1} \leq b$, a choke flow results.

$$Q=600XC(P_1+0.1)\sqrt{\frac{293}{273+t}}$$

If $\frac{P_2+0.1}{P_1+0.1} > b$, a subsonic flow results.

$$Q=600XC\,(P_1+0.1)\sqrt{1-\left[\frac{\frac{P_2+0.1}{P_1+0.1}-b}{1-b}\right]^2}\sqrt{\frac{293}{273+t}}$$

Q : Air flow rate [dm^3/min(ANR)].
The dm^3 (cubic decimeter) in the SI system may be expressed by L(liter). $1dm^3=1L$.
Standard condition: Air under condition temperature 20°C, absolute pressure 0.1MPa (=100kPa=1bar), relative humidity 65%.

C: Sonic conductance [dm^3/(s•bar)]

b: Critical pressure ratio [-]

P_1: Upstream pressure [MPa]

P_2: Downstream pressure [MPa]

t: Temperature [°C]

Note) The formula for subsonic flow is that of an elliptic approximate curve.

Figure 1 is the flow characteristic diagram. For more information, please see Energy Saving Programs by SMC.

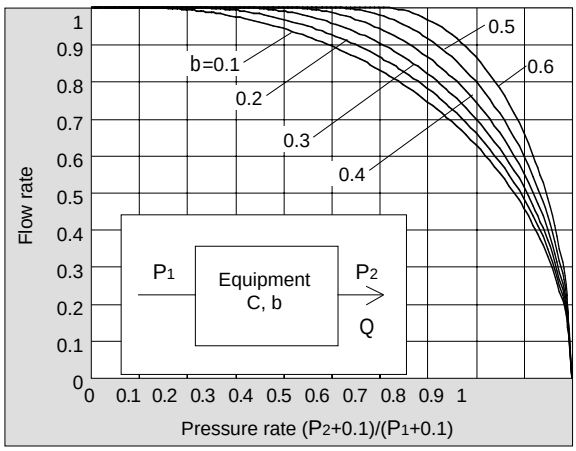

Figure 1 Flow rate characteristic diagram

(2) Test method

Pipe the test equipment to the test circuit shown in Figure 2. Keep the upstream pressure at a certain constant level above 0.3MPa. First measure the maximum flow rate in saturation. Then, measure the flow rate, upstream pressure and downstream pressure each at 80%, 60%, 40% and 20% points of the flow rate. Calculate the sonic conductance C from the maximum flow rate. Also, substitute other data for variables in the formula for sobsonic flow and obtain the critical pressure rate b by averaging the critical pressure rates at those points.

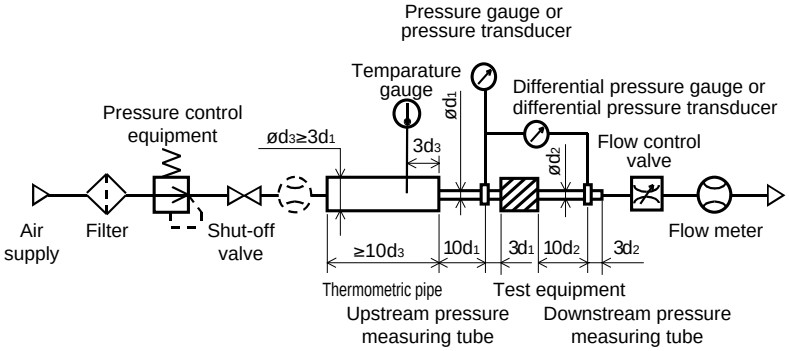

Figure 2 Test circuit of ISO 6358 and JIS B 8390

2.2 Effective sectional area S

(1) Calculation with subsonic conductance C:

$S = 5.0 \times C$

2) Test method

Pipe the test equipment to the test circuit shown in Figure 3. Fill the air tank with compressed air and keep the pressure at a constant level above 0.6MPa. Then discharge the air until the pressure in the tank drops to 0.25MPa. Measure the time required to discharge the air and the residual pressure in the air tank after leaving it until the pressure becomes stable in order to calculate the effective sectional area S by the following formula. Select the capacity of the air tank according to the effective sectional area of the test equipment.

$$S = 12.1 \frac{V}{t} \log_{10}\left(\frac{P_s + 0.1}{P + 0.1}\right) \sqrt{\frac{293}{T}}$$

S: Effective sectional area [mm^2]

V: Air tank capacity [dm^3]

t : Discharge time [s]

P_s: Pressure in the air tank before discharge [MPa]

P : Residual pressure in the air tank after discharge [MPa]

T: Temperature in the air tank before discharge [K]

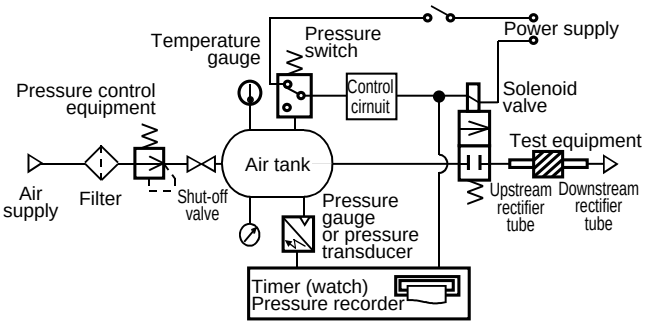

Figure 3. Test circuit of JIS B 8390

2.3 Flow coefficient Cv factor

The flow coefficient Cv factor is defined with the following formula in the U.S. standard ANSI/(NFPA)T3.21.3: 1990: Pneumatic fluid power - Flow rating test procedure and reporting method - For fixed orifice components

$$Cv = \frac{Q}{114.5\sqrt{\frac{\triangle P(P_2 + Pa)}{T_1}}}$$

$\triangle P$: Pressure drop between static pressure output ports [bar]

Q : Flow rate [dm^3/s standard atmosphere]

P_1 : Pressure at ustream output port [bar gauge]

Pa : Atmospheric pressure [bar absolute]

P_2 : Pressure at downstream output port [bar gauge]: $P_2 = P_1 - \triangle P$

T_1 : Upstream absolute temperature [K]

Test conditions are $P_1 + Pa = 6.5 \pm 0.2$ bar absolute, $T_1 = 297 \pm 5$K, $0.07\text{bar} \leq \triangle P \leq 0.14$ bar.

This concept is similar to the effective area in ISO 6358, which is described to be applicable only if the pressure drop is so small compared with the upstream pressure that air compression is negligible.

Series VQC
Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by a label of **"Caution", "Warning"** or **"Danger"**. To ensure safety, be sure to observe ISO 4414 Note 1), JIS B 8370 Note 2) and other safety practices.

⚠ Caution: Operator error could result in injury or equipment damage.

⚠ Warning: Operator error could result in serious injury or loss of life.

⚠ Danger: In extreme conditions, there is a possible result of serious injury or loss of life.

Note 1) ISO4414: Pneumatic fluid power — General rules relating to systems.
Note 2) JIS B 8370: General rules for pneumatic equipment

⚠ Warning

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility for the specific system must be based on specifications or after analysis and/or tests to meet your specific requirements. The expected performance and safety assurance will be the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalogue information with a view to giving due consideration to any possibility of equipment failure when configuring a system.

2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.

3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.

1. Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions.
2. When equipment is to be removed, confirm the safety process as mentioned above. Cut the supply pressure for this equipment and exhaust all residual compressed air in the system.
3. Before machinery/equipment is restarted, take measures to prevent shooting-out of cylinder piston rod, etc. (Bleed air into the system gradually to create back pressure.)

4. Contact SMC if the product is to be used in any of the following conditions:

1. Conditions and environments beyond the given specifications, or if product is used outdoors.
2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, press applications, or safety equipment.
3. An application that has the possibility of having negative effects on people, property, or animals, and therefore requires special safety analysis.

Series VQC
5-Port Solenoid Valve Precautions 1

Be sure to read before handling.

Design

⚠Warning

1. Actuator drive

When an actuator, such as a cylinder, is to be driven using a valve, take appropriate measures to prevent any potential danger caused by actuator operation.

2. Intermediate stopping

When a 3-position closed centre valve is used to stop a cylinder's piston at an intermediate position, accurate stopping of the piston in a predetermined position is not possible due to the compressibility of air.

Furthermore, since valves and cylinders are not guaranteed for zero air leakage, it may not be possible to hold a stopped position for an extended length of time. Contact SMC if it is necessary to hold a stopped position for an extended time.

3. Effect of back pressure when using a manifold

Use caution when valves are used on a manifold, as actuator malfunction due to back pressure may occur. Special caution is necessary when using a 3-position exhaust centre valve, or when driving a single acting cylinder. In cases where there is a danger of this kind of malfunction, take countermeasures by using a back-pressure check valve, an individual EXH spacer assembly, or an EXH blocking plate.

4. Dealing with pilot exhaust

Operate the pilot exhaust port (PE) with silencers mounted on both the D and U sides, or with release to atmosphere. If merged with the main exhaust, the main valve may malfunction due to back pressure.

5. Holding of pressure (including vacuum)

Since valves are subject to air leakage, they cannot be used for applications such as holding pressure (including vacuum) in a pressure vessel.

6. Not for use as an emergency shutoff valve

None of the valves featured in this catalogue is designed for safety applications such as an emergency shutoff valve. If application to this type of system is required, other reliable safety assurance measures should also be adopted.

7. Maintenance space

The installation should allow sufficient space for maintenance activities.

8. Release of residual pressure

Provide a residual pressure release function for maintenance purposes. Special consideration should be given to the release of residual pressure between the valve and cylinder in the case of a 3-position closed centre type valve.

9. Vacuum applications

When a valve is used for vacuum switching, take appropriate measures against the suction of external dust or other contaminants through vacuum pads and exhaust ports. An external pilot type valve should be used in such cases. Contact SMC regarding the use of an internal pilot type or air operated valve.

10. Take suitable protective measures in locations or applications where valves are constantly exposed to water.

11. Double solenoid applications

When a double solenoid type is used for the first time, the actuator may operate in an unexpected direction depending on the valve's switch position. Take appropriate measures to prevent potential danger caused by actuator operation.

12. Ventilation

When using valves in a sealed control panel, install a vent to prevent rise of pressure inside the control panel caused by exhaust air and trapping of heat generated by the valve.

Selection

⚠Warning

1. Confirm all specifications.

The products featured in this catalogue are designed only for use in compressed air systems (including vacuum). Do not operate at pressures or temperatures beyond the range of specifications, as this can cause damage or malfunction. (Refer to specifica-tions.)

Contact SMC when using a fluid other than compressed air (including vacuum).

2. Extended periods of continuous energization

- If a valve is continuously energized for an extended period, heat generation of the coil may result in a reduced performance and shorter service life of the valve or have an adverse effect on the peripheral equipment in proximity. For this reason, a low wattage type should be used when the energization is to continue for an extended period or the time in a day when the valve is energized is to be longer than the time when it is not. Under some operating conditions, valves other than the above can be used. For more information, please consult SMC. It is also possible to avoid the problem by shortening the energization time by using the valve as a N.O. (Normally open) type.
- When a valve is installed inside the control panel, take measures against heat radiation so that the temperature will stay within the prescribed temperature range for the valve. There will be a large increase in temperature especially when three or more adjacent manifold stations are continuously energized for an extended period or when A and B sides of a dual 3 port valve are both continuously energized for an extended period. Take special precautions in such cases.

⚠Caution

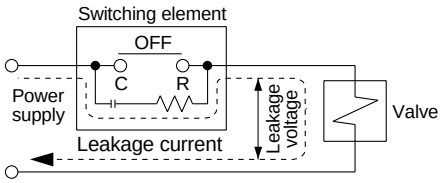
1. Momentary energization

If a double solenoid valve will be operated with momentary energization, it should be energized for at least 0.1 second.

However, depending on the secondary load conditions, it should be energized until the cylinder reaches the stroke end position. If the valve is to be used in an air blowing application, it should be energized continuously during the application.

2. Leakage voltage

When using a C-R element (surge voltage suppressor) for protection of the switching element, please keep in mind that leakage voltage will increase due to leakage current flowing through the C-R element.



Limit the amount of residual leakage voltage to the following values:

With DC coil

2% or less of rated voltage

Series VQC
5-Port Solenoid Valve Precautions 2

Be sure to read before handling.

Selection

⚠Caution

3. Surge voltage suppressor

If a general diode such as Zener diode or ZNR is used in the surge voltage suppressor on the controller side, be aware that there will be a residual voltage according to the protective element and rated voltage. The residual voltage of the diode is approximately 1V.

4. Low temperature operation

Avoid ambient temperatures outside the range of –10°C to 50°C. At low temperatures, take any necessary steps to avoid solidification or freezing of drainage and moisture.

5. For air blowing applications

When using solenoid valves for air blowing, use external pilot type valves.

Also, air supply to the external pilot port should be compressed air that is within the pressure range prescribed in the specifications.

6. Mounting orientation

In the case of a single solenoid, the mounting orientation is unrestricted. In the case of double solenoid or 3-position valves, mount so that the spool valve is horizontal.

Also, when mounting for an application that will inevitably involve vibration or impact, mount so that the spool valve is at a right angle to the direction of vibration.

Do not use in applications where vibration or impact exceed the product's specifications.

Mounting

⚠Warning

1. If air leakage increases or equipment does not operate properly, stop operation.

After mounting, repairs, or equipment modification, connect the compressed air and power supplies, and perform appropriate function and leakage inspections to confirm that the unit is mounted properly.

2. Instruction manual

Mount and operate the product only after reading the manual carefully and understanding its contents. Always keep the manual handy for easy reference.

3. Painting and coating

Warnings or specifications printed or pasted on the product should not be erased, removed or covered up.

Piping

⚠Caution

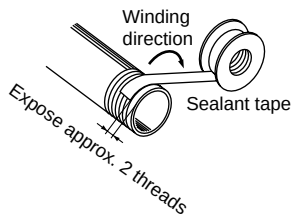
1. Preparation before piping

Before piping is connected, it should be thoroughly flushed out with air or washed out with water to remove chips, cutting oil and other debris.

2. Wrapping of sealant tape

When connecting pipes and fittings, etc., be sure that neither chips from the pipe threads nor sealing material get inside the valve.

When using sealant tape, leave 1.5 to 2 thread ridges exposed at the end of the pipe/fitting.



3. When using closed center type valves

When using closed center type valves, check carefully to make sure there are no air leaks from the piping between the valves and cylinders.

4. Ensure tightening to the prescribed tightening torques.

When screwing fittings into valves, tighten according to the torques given below.

1) For M3, M5 threads

1-1) When using SMC fittings, tighten in the following manner: After tightening by hand, tighten an additional 1/4 rotation for M3 and 1/6 rotation for M5 with a tool. When using a miniature fitting, however, tighten an additional 1/4 rotation with a tool after tightening by hand. When there are 2 gaskets, as in the case of a universal elbow or universal tee, tighten an additional 1/2 rotation.

Note) Over-tightening will cause breakage of the fitting threads or deformation of the gasket, resulting in air leakage. Under-tightening will cause loosening or air leakage.

1-2) When using fittings other than SMC products, follow the instructions by the respective manufacturers.

Tightening torques for piping

Connection thread	Proper tightening torque (N·m)
Rc 1/8	7 to 9
Rc 1/4	12 to 14
Rc 3/8	22 to 24
Rc 1/2	28 to 30
Rc 3/4	28 to 30

5. Connection of piping to products

When connecting piping to a particular product, refer to the product's instruction manual to avoid mistakes regarding the supply port and other connections as applicable.

Series VQC
5-Port Solenoid Valve Precautions 3

Be sure to read before handling.

Wiring

⚠Caution

1. Polarity

Always confirm whether or not there is polarity when connecting a power supply to a DC specification solenoid valve equipped with a (light) voltage surge suppressor.

If there is a polarity, observe the following precautions:

• If there is no built-in diode for polarity protection:

Switching polarity by mistake poses the danger of burnout to the valve's built-in diode and the switching element on the control mechanism side, as well as to the power supply mechanism.

• If there is a diode for polarity protection:

Switching polarity by mistake will cause the valve's switching function to stop.

∗ Series VQ4000 has no polarity. (It is a polarity-free type valve.)

2. Applied voltage

Be careful to apply the proper voltage when connecting electric power to the solenoid valve. Application of improper voltage may cause malfunction or coil damage.

3. Confirm the connections.

After completing the wiring, confirm that all the connections are correct.

Lubrication

⚠Caution

1. Lubrication

[Rubber seal]

1) The valve has been lubricated for life at the factory, and does not require any further lubrication.

2) Should you wish to apply additional lubrication, however, please be sure to use ISO VG32 Class 1 turbine oil (without additives).

Please be aware, however, that once additional lubrication is applied, it must be continued to avoid malfunctions, as the new lubricant will completely cancel out the original lubrication.

[Metal seal]

1) The valve has been lubricated for life at the factory and does not require any further lubrication.

2) Should you wish to apply additional lubrication, however, please be sure to use ISO VG32 Class 1 turbine oil (without additives).

Air Supply

⚠Warning

1. Use clean air.

Do not use compressed air which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as this can cause damage or malfunction.

⚠Caution

1. Install air filters.

Install air filters close to valves at their upstream side. A filtration degree of 5μm or less should be selected.

2. Install an air dryer or after-cooler.

Compressed air that includes excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an air dryer or after-cooler.

3. If excessive carbon powder is generated, eliminate it by installing mist separators at the upstream side of valves.

If excessive carbon powder is generated by the compressor, it may adhere to the inside of valves and cause malfunction.

Refer to SMC's "Air Cleaning Equipment" catalogue for further details on compressed air quality.

Operating Environment

⚠Warning

1. Do not use valves where there is direct contact with, or in atmospheres of, corrosive gases, chemicals, salt water, water or steam.

2. Do not use in an explosive atmosphere.

3. Do not use in locations subject to vibration or impact. Confirm the specifications for each series.

4. A protective cover should be used to shield valves from direct sunlight.

5. Shield valves from radiated heat generated by nearby heat sources.

6. Employ suitable protective measures in locations where there is contact with water droplets, oil, or welding spatter.

7. When solenoid valves are mounted in a control panel or are energized for extended periods of time, employ measures to radiate excess heat so that temperatures remain within the valve specification range.

8. Products with IP65 enclosures (based on IEC529) are protected against dust and water, however, these products cannot be bathed in water.

9. Products with enclosure conforming to IP65 rating will satisfy the specifications only if they are installed correctly. Therefore, be sure to read the instructions for respective products.

Series VQC
5-Port Solenoid Valve Precautions 4

Be sure to read before handling.

Maintenance

⚠Warning

1. Perform maintenance procedures as shown in the instruction manual.

If handled improperly, malfunction or damage of machinery or equipment may occur.

2. Equipment removal and supply/exhaust of compressed air

When equipment is to be removed, first confirm that measures are in place to prevent dropping of driven objects and run-away of equipment, etc. Then cut the supply air pressure and electric power, and exhaust all compressed air from the system using its residual pressure release function.

When the equipment is to be started again after remounting or replacement, first confirm that measures are in place to prevent lurching of actuators and then confirm that equipment operates normally.

3. Infrequent operation

Valves should be switched at least once every 30 days to prevent malfunction. (Use caution regarding the air supply.)

4. Manual override operation

When the manual override is operated, connected equipment will be actuated. Confirm safety before operating.

⚠Caution

1. Filter drainage

Drain out condensate from air filters regularly. (Refer to specifications.)

2. Lubrication

In the case of rubber seals, once lubrication has been started, it must be continued.

Use VG32 Class 1 turbine oil (without additives). Other lubricating oils will cause malfunctions.

Contact SMC regarding VG32 Class 2 turbine oil (with additives).

Specific Product Precautions 1

Be sure to read before handling.
Refer to pages 63 through 67 for Safety instructions and common precautions.

⚠Warning

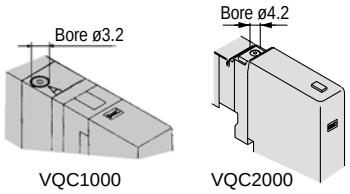
Manual Override

Since connected equipment will operate when the manual override is activated, confirm that conditions are safe prior to activation.

The non-locking push type (tool required) is standard, and the slotted locking type (tool required) is optional.

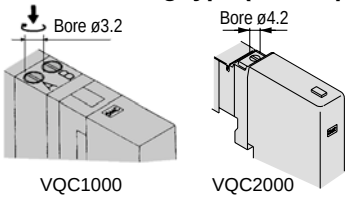
■ VQC1000/2000

Non-locking push type (tool required)



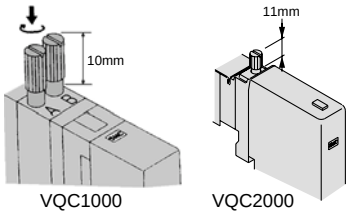
Push down the manual override button with a small screwdriver, etc., until it stops.
The manual override will return when released.

Slotted locking type (tool required) <Optional>



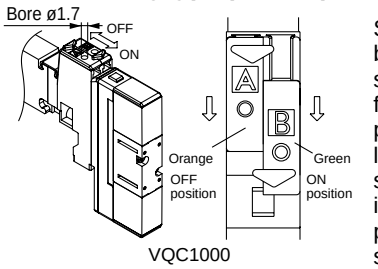
Push down the manual override button with a small flat head screwdriver until it stops, and turn it clockwise 90° to lock it. Turn it counter-clockwise to release it.

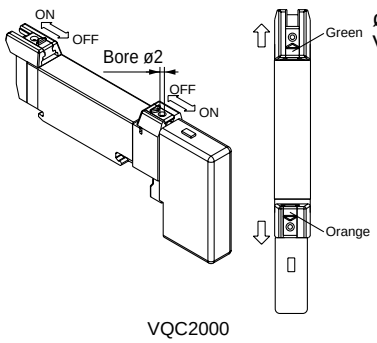
Locking type (manual) <Optional>



Push down the manual override button with a small flat head screwdriver or with your finger until it stops, and turn it clockwise 90° to lock it. Turn it counterclockwise to release it.

Slide locking type (manual) <Optional>

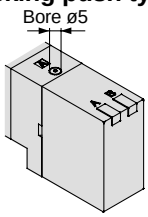




Slide the manual override button with a small flat head screwdriver or with your finger until it stops at the pilot valve side (ON side) to lock it. Slide it to the fitting side (OFF side) to release it. It can also be used as a push type using a screwdriver, etc., of ø1.7 or less in case of VQC1000, ø2 or less in case of VQC2000.

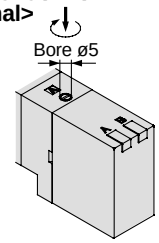
■ VQC4000

Non-locking push type (tool required)

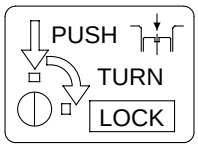


Push down the manual override button with a small screwdriver until it stops.
The manual override will return when released.

Locking type (manual) <Optional>

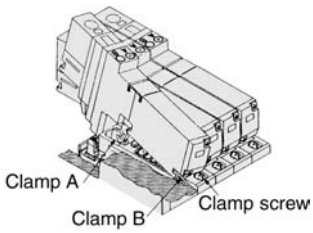


Push down the manual override button with a small flat head screwdriver until it stops, and turn it clockwise 90° to lock it. Turn it counter-clockwise to release it.



⚠Caution

Solenoid Valve Removal and Mounting VQC1000/2000



Removal steps

1. Loosen the clamp screws until they turn freely. (The screws do not come out.)
2. Remove the solenoid valve from clamp B by lifting the coil side of the valve while pushing on the screw top.
   If pushing down on the screw is difficult, you can alternately press down on the valve gently in the area near the manual override.

Mounting steps

1. Push the clamp screws. Clamp A opens. Now insert the end plate hook of the valve into clamp B from an angle.
2. Push the valve down into place. (When you release the screws, the valve will be locked into clamp A.)
3. Tighten the clamp screws with a tightening torque of 0.25 to 0.35N·m for VQC1000 and 0.5 to 0.7N·m for VQC2000.

⚠Caution

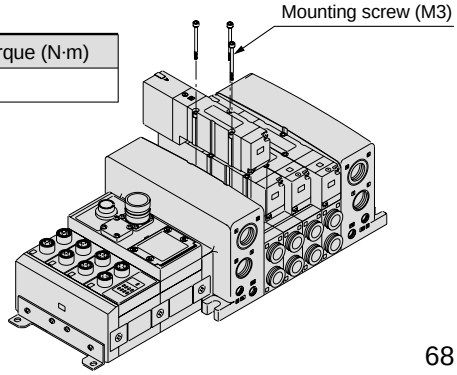
Do not let foreign matter stick on the seal side of the gasket and solenoid, as this will cause air leakage.

⚠Caution

Valve Mounting VQC4000

After confirming that the gasket is installed correctly, securely tighten the mounting screws according to the tightening torque shown below.

Proper tightening torque (N·m)
0.8 to 1.2



Specific Product Precautions 2

Be sure to read before handling.
Refer to pages 63 through 67 for Safety instructions and common precautions.

⚠ Caution

Replacing One-touch fittings

Cylinder port fittings are available in cassette type and can be replaced easily.

Fittings are secured with a retaining clip that is inserted from the top side of the valve. After removing the valve, remove the clip with a flat head screw driver to replace the fittings.

To mount a fitting, insert the fitting assembly until it stops and reinsert the retaining clip to its designated position.

How to Find the Flow Rate

Refer to pages 61 and 62.

Specific Product Precautions 3

Be sure to read before handling.
Refer to pages 63 through 67 for Safety instructions and common precautions.

Serial Wiring EX500/EX250/EX240/EX126 Precautions

⚠Warning

1. These products are intended for use in general factory automation equipment.

Avoid using these products in machinery/equipment which affects human safety, and in cases where malfunction or failure can result in extensive damage.

2. Do not use in explosive environments, in the presence of inflammable gases, or in corrosive environments. This can cause injury or fire.

3. Work such as transporting, installing, piping, wiring, operation, control and maintenance should be performed by knowledgable and qualified personnel only. As handling involves the risk of a danger of electrocution, injury or fire.

4. Install an external emergency stop circuit that can promptly stop operation and shut off the power supply.

5. Do not modify these products. Modifications done to these products carry the risk of injury and damage.

⚠Caution

1. Read the instruction manual carefully, strictly observe the precautions and operate within the range of the specifications.

2. Do not drop these products or submit them to strong impacts. This can cause damage, failure or malfunction.

3. In locations with poor electrical conditions, take steps to ensure a steady flow of the rated power supply. Use of a voltage outside of the specifications can cause malfunction, damage to the unit, electrocution or fire.

4. Do not touch connector terminals or internal circuit elements when current is being supplied. There is a danger of malfunction, damage to the unit or electrocution if connector terminals or internal circuit elements are touched when current is being supplied.

Be sure that the power supply is OFF when adding or removing manifold valves or input blocks or when connecting or disconnecting connectors.

5. Operate at an ambient temperature that is within the specifications. Even when the ambient temperature range is within the specifications, do not use in locations where there are rapid temperature changes.

⚠Caution

6. Keep wire scraps and other extraneous materials from getting inside these products. This can cause fire, failure or malfunction.

7. Give consideration to the operating environment depending on the type of enclosure being used.

To achieve IP65 and IP67 protection, provide appropriate wiring between all units using electrical wiring cables, communication connectors and cables with M12 connectors. Also, provide waterproof caps when there are unused ports, and perform proper mounting of input units, input blocks, SI units and manifold valves. Provide a cover or other protection for applications in which there is constant exposure to water.

8. Use the proper tightening torques.

There is a possibility of damaging threads if tightening exceeds the tightening torque range.

9. Adjustment and operation.

Use a sharp-ended watchmakers screw driver to set the dip switches and rotary switches.

10. Provide adequate protection when operating in locations such as the following:

- Where noise is generated by static electricity
- Where there is a strong electric field
- Where there is a danger of exposure to radiation
- When in close proximity to power supply lines

11. When these products are installed in equipment, provide adequate protection against noise by using noise filters.

12. Since these products are components whose end usage is obtained after installation in other equipment, the customer should confirm conformity to EMC directives for the finished product.

13. Do not remove the name plate.

14. Perform periodic inspections and confirm normal operation, otherwise it may be impossible to guarantee safety due to unexpected malfunction or erroneous operation.

Specific Product Precautions 4

Be sure to read before handling.
Refer to pages 63 through 67 for Safety instructions and common precautions.

When one AS-i power supply system is used

⚠ Caution

		TCW	SDTC	TDW	SDTD
Power supply voltage		Supplied from AS-i circuit, 26.5 to 31.6 VDC Note 1)			
Current consumption Note 2)		Max. 100 mA		Max.65 mA	
Input/output specification	Number of inputs	8		4	
	Number of outputs	8		4	
	Valve supply voltage	24 VDC ± 10%			
	Possible supply current Note 3)	Max. 240 mA		Max. 120 mA	

Note 1) For communication power supply, use a power supply dedicated to AS-i. For details, please refer to instruction manuals provided by the respective manufacturers.
Note 2) Current consumption of SI unit internal power supply
Note 3) The AS-i circuit provides current to the internal parts of the SI unit and all connected equipment.
Since there is a limit on the possible supply current to all connected equipment, select the equipment connected to the input block, such as sensors and valves, to stay within the possible supply current.

Example) When SDTD type is used

Valve: VQC1100NY – 5 (low wattage type of 0.5 W) × 4 pcs.

0.5 [W] ÷ 24 [V] × 4 [pcs.] = 84 [mA] (4 outputs simultaneously ON)

The maximum possible supply current of SDTD is 120 mA. Therefore, the possible supply current to the sensor connected to the input block is

120 [mA] – 84 [mA] = 36 [mA].

Use of low wattage type valves by minimizing the maximum number of simultaneous outputs, and low current consumption sensors (2 wire sensor, etc.) connected to the input block is recommended.

Power Supply Safety Instructions

⚠ Caution

1. Operation is possible with a single power supply or a separate power supply. However, be sure to provide two wiring systems (one for solenoid valves, and one for input and control units).

2. Use the following UL approved products for DC power supply combinations.

(1) Controlled voltage current circuit conforming to UL508
Circuit uses the secondary coil of an isolated transformer as the power supply, satisfying the following conditions.
• Max. voltage (with no load): 30Vrms (42.4V peak) or less
• Max. current: ① 8A or less (including shorts), and
② When controlled by a circuit protector (fuse) with the following ratings:

No-load voltage (V peak)	Max. current rating
0 to 20 [V]	5.0
Over 20 [V] and up to 30 [V]	$\frac{100}{\text{Peak voltage value}}$

(2) A circuit (class 2 circuit) with maximum 30Vrms (42.4V peak) or less, and a power supply consisting of a class 2 power supply unit conforming to UL1310, or a class 2 transformer conforming to UL1585.

Cable Safety Instructions

⚠ Caution

1. Avoid miswiring, as this can cause malfunction, damage and fire in the unit.

2. Do not conduct wiring work while the cables are energized.
The SI unit may be damaged or malfunction.

3. To prevent noise and surge in signal lines, keep all wiring separate from power lines and high voltage lines. Otherwise, this can cause a malfunction.

4. Check wiring insulation, as defective insulation can cause damage to the unit when excessive voltage or current is applied.

5. Do not bend or pull cables repeatedly, and do not place heavy objects on them or allow them to be pinched. This can cause broken lines.
